populations to the global economy the relationship between humans and their environment is being modified in ways that will have long term impacts on ecological health biodiversity ecosystem goods and services population vulnerability and sustainability These changes and challenges are perhaps nowhere more evident than in island ecosystems Buffeted by rising ocean temperatures extreme weather events sea level rise climate change tourism population migration invasive species and resource limitations islands represent both the greatest vulnerability to globalization and also the greatest scientific opportunity to study the significance of global changes on ecosystem processes human environment interactions conservation environmental policy and island sustainability In this book we study islands through the lens of Land Cover Land Use Change LCLUC and the multi scale and multi thematic drivers of change In addition to assessing the key processes that shape and re shape island ecosystems and their land cover land use changes the book highlights measurement and assessment methods to characterize patterns and trajectories of change and models to examine the social ecological drivers of change on islands For instance chapters report on the results of a meta analysis to examine trends in published literature on islands a satellite image time series to track changes in urbanization social surveys to support household analyses field sampling to represent the state of resources and their limitations on islands and dynamic systems models to link socio economic data to LCLUC patterns The authors report on a diversity of islands conditions and circumstances that affect LCLUC patterns and processes often informed through perspectives rooted for instance in conservation demography ecology economics geography policy and sociology

The Action Plan for Australian Birds 2020 Stephen T. Garnett,G Barry Baker,2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia s avifauna ever attempted The latest in a series of action plans for Australian birds that have been produced every decade since 1992 it is also the largest The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country and feature far more detail than any of the earlier plans This volume also includes accounts of over 60 taxa that are no longer considered threatened mainly thanks to sustained conservation action over many decades This extensive book covers key themes that have emerged in the last decade including the increasing impact of climate change as a threatening process most obviously in Queensland s tropical rainforests where many birds are being pushed up the mountains However the effects are also indirect as happened in the catastrophic fires of 2019 20 Many of the newly listed birds are subspecies confined to Kangaroo Island where fire destroyed over half the population But there are good news stories too especially on islands where there have been spectacular successes with predator control Such uplifting results demonstrate that when action plans are followed by action on the ground threatened species can indeed be recovered and threats alleviated
