Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience

Rao, 2022-09-01 Video is the main driver of bandwidth use accounting for over 80 per cent of consumer Internet traffic Video compression is a critical component of many of the available multimedia applications it is necessary for storage or transmission of digital video over today's band limited networks The majority of this video is coded using international standards developed in collaboration with ITU T Study Group and MPEG The MPEG family of video coding standards begun on the early 1990s with MPEG 1 developed for video and audio storage on CD ROMs with support for progressive video MPEG 2 was standardized in 1995 for applications of video on DVD standard and high definition television with support for interlaced and progressive video MPEG 4 part 2 also known as MPEG 2 video was standardized in 1999 for applications of low bit rate multimedia on mobile platforms and the Internet with the support of object based or content based coding by modeling the scene as background and foreground Since MPEG 1 the main video coding standards were based on the so called macroblocks However research groups continued the work beyond the traditional video coding architectures and found that macroblocks could limit the performance of the compression when using high resolution video Therefore in 2013 the high efficiency video coding HEVC also known as H 265 was released with a structure similar to H 264 AVC but using coding units with more flexible partitions than the traditional macroblocks HEVC has greater flexibility in prediction modes

Gervasi, 2014-07-01 The six volume set LNCS 8579 8584 constitutes the refereed proceedings of the 14th International Conference on Computational Science and Its Applications ICCSA 2014 held in Guimarães Portugal in June July 2014 The 347 revised papers presented in 30 workshops and a special track were carefully reviewed and selected from 1167 The 289 papers presented in the workshops cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security Multisensory and sensorimotor interactions in speech perception Kaisa Tiippana, Jean-Luc Schwartz, Riikka Möttönen, 2015-06-26 Speech is multisensory since it is perceived through several senses Audition is the most important one as speech is mostly heard The role of vision has long been acknowledged since many articulatory gestures can be seen on the talker's face Sometimes speech can even be felt by touching the face The best known multisensory illusion is the McGurk effect where incongruent visual articulation changes the auditory percept The interest in the McGurk effect arises from a major general question in multisensory research How is information from different senses combined Despite decades of research a conclusive explanation for the illusion remains elusive This is a good demonstration of the challenges in the study of multisensory integration Speech is special in many ways It is the main means of human communication and a manifestation of a unique language system It is a signal with which all humans have a lot of experience We are exposed to it from birth and learn it through development in face to face contact with others It is a signal that we can both perceive and produce The role of the motor system in speech perception has been debated for a long time Despite very active current research it is still unclear to which extent and in which role the motor system is involved in speech perception Recent evidence shows that brain areas involved in speech production are activated during listening to speech and watching a talker's articulatory gestures Speaking involves coordination of articulatory movements and monitoring their auditory and somatosensory consequences How do auditory visual somatosensory and motor brain areas interact during speech perception How do these sensorimotor interactions contribute to speech perception It is surprising that despite a vast amount of research the secrets of speech perception have not yet been solved The multisensory and sensorimotor approaches provide new opportunities in solving them Contributions to the research topic are encouraged for a wide spectrum of research on speech perception in multisensory and sensorimotor contexts including novel experimental findings ranging from psychophysics to brain imaging theories and models reviews and opinions **Computational Intelligence in Machine Learning** Amit Kumar, Jacek M.
