Leikin, Rina Zazkis, 2010-04-10 The idea of teachers Learning through Teaching LTT when presented to a naive bystander

appears as an oxymoron Are we not supposed to learn before we teach After all under the usual circumstances learning is the task for those who are being taught not of those who teach However this book is about the learning of teachers not the

learning of students It is an ancient wisdom that the best way to truly learn something is to teach it to others Nevertheless

once a teacher has taught a particular topic or concept and consequently truly learned it what is left for this teacher to learn

As evident in this book the experience of teaching presents teachers with an exciting opportunity for learning throughout their

entire career This means acquiring a better understanding of what is being taught and moreover learning a variety of new

things What these new things may be and how they are learned is addressed in the collection of chapters in this volume LTT

is acknowledged by multiple researchers and mathematics educators In the first chapter Leikin and Zazkis review literature

that recognizes this phenomenon and stress that only a small number of studies attend systematically to LTT processes The

authors in this volume purposefully analyze the teaching of mathematics as a source for teachers own learning

Engineering Digital Design Richard F. Tinker, 2000-01-18 Engineering Digital Design Second Edition provides the most extensive coverage of any available textbook in digital logic and design The new REVISED Second Edition published in

September of 2002 provides 5 productivity tools free on the accompanying CD ROM This software is also included on the

Instructor's Manual CD ROM and complete instructions accompany each software program In the REVISED Second Edition

modern notation combines with state of the art treatment of the most important subjects in digital design to provide the

student with the background needed to enter industry or graduate study at a competitive level Combinatorial logic design

and synchronous and asynchronous sequential machine design methods are given equal weight and new ideas and design approaches are explored The productivity tools provided on the accompanying CD are outlined below

- 1 EXL Sim2002 logic simulator EXL Sim2002 is a full featured interactive schematic capture and simulation program that is ideally suited for use with the text at either the entry or advanced level of logic design Its many features include drag and drop capability rubber banding mixed logic and positive logic simulations macro generation individual and global or randomized delay assignments connection features that eliminate the need for wire connections schematic page sizing and zooming waveform zooming and scrolling a variety of printout capabilities and a host of other useful features
- 2 BOOZER logic minimizer BOOZER is a software minimization tool that is recommended for use with the text It accepts entered variable EV or canonical 1 s and 0 s data from K maps or truth tables with or without don t cares and returns an optimal or near optimal single or multi output solution It can handle up to 12 functions Boolean functions and as many inputs when used on modern computers
- 3 ESPRESSO II logic minimizer ESPRESSO II is another software minimization tool widely used in schools and industry It supports advanced heuristic algorithms for minimization of two level multi output Boolean functions but does not accept entered variables It is also readily available from the University of California Berkeley
- 1986 VLSI Tools Distribution
- 4 ADAM design software ADAM for Automated Design of Asynchronous Machines is a very powerful productivity tool that permits the automated design of very complex asynchronous state machines all free of timing defects The input files are state tables for the desired state machines The output files are given in the Berkeley format appropriate for directly programming PLAs ADAM also allows the designer to design synchronous state machines timing defect free The options include the lumped path delay LPD model or NESTED CELL model for asynchronous FSM designs and the use of D FLIP FLOPs for synchronous FSM designs The background for the use of ADAM is covered in Chapters 11 14 and 16 of the REVISED 2nd Edition
- 5 A OPS design software A OPS for Asynchronous One hot Programmable Sequencers is another very powerful productivity tool that permits the design of asynchronous and synchronous state machines by using a programmable sequencer kernel This software generates a PLA or PAL output file in Berkeley format or the VHDL code for the automated timing defect free designs of the following
 - a Any 1 Hot programmable sequencer up to 10 states
 - b The 1 Hot design of multiple asynchronous or synchronous state machines driven by either PLDs or RAM
 The input file is that of a state table for the desired state machine This software can be used to design systems with the capability of instantly switching between several radically different controllers on a time shared basis The background for the use of A OPS is covered in Chapters 13 14 and 16 of the REVISED 2nd Edition
