Cell - the basic unit of structure and organization of organisms

Parts of the cell theory - All organisms are composed of one or more cells, all cells come from pre-existing cells, and that the cell is the basic unit of structure and organization of organisms

Types of microscopes

- Light microscope - Uses light and lenses, it is the simplest light microscope that uses one lens and natural light, it magnifies up to 1500 times, and the compound microscope uses multiple lenses
- Electron microscope - Uses a beam of electrons, magnifies up to 500,000 times, it was invented in the 1940s, and there are two types of electron microscopes.

Types of Electron Microscopes - The two types of electron microscopes are the scanning electron microscope and the transmission electron microscope.

Prokaryotic Cells - These cells contain a plasma membrane but does not contain membrane-bound organelles. These cells do not have a nucleus.

Eukaryotic Cells - These cells contain a plasma membrane and membrane-bound organelles

Plasma membrane - A thin flexible boundary between the cell and its environment

Permeable - Allows substances to pass through the membrane

Selectively permeable - The plasma membrane controls the movement of substances into and out of the cell

Phospholipid bilayer - Allows other molecules to 'float' in the membrane

Label the parts of a phospholipid - The parts of a phospholipid are composed of a glycerol backbone, two fatty acid chains, and a phospholipid group

Fluid mosaic model - The phospholipid bilayer that allows other molecules to "float" in the membrane

Parts of a microscope and their functions - The parts of a microscope are the eyepiece, nosepiece, objective lenses, stage clips, stage, light source, arm, coarse adjustment knob, fine adjustment knob, diaphragm, and base. The eyepiece contains the ocular lens, the nosepiece holds the high and low power objective lenses that can be rotated to change magnification. The objective lenses magnification ranges to change 40x to 400x. The stage clips hold the slide in place. The stage

 fall of 1975 Although each of us arrived with clinical and research interests in the broad field of sexual problems the idea for
 this book grew out of our early discussions and a consensus on the future direction of research We noted that there had been
 an extremely rapid increase in knowledge of human sexual behavior as well as sexual disorders and their treatment over the
 last few decades It has also become increasingly apparent that sexual problems broadly conceived comprise a sizable fraction
 of the problems for which people seek treatment and that although the treatment of sexual problems was achieving some
 success treatment was for the most part slow costly and without any guarantee of successful outcome Furthermore there
 were many people with sexual problems for whom treatment was not available With these ideas in mind it seemed timely for
 investigators in the field of human sexuality and its disorders to turn their attention to the problem of prevention Organizing
 a symposium on the topic enabled us to invite leading investigators in the study of sexual behavior to address this area The
 chapters in this volume are an outgrowth and refinement of the formal papers delivered at the symposium which was held in
