Teacher: Dr. Eichers

Textbook: Miller, K. and J. Levine. (2004). *Biology*. New Jersey: Prentice Hall.

Purpose of Course:

Biology is the study of life. The course includes the study of the structure and function of living organisms, energy transformations, comparative survey of life processes, diversity of life, and the interdependence of organisms and their environment. Investigations emphasize process skill development and safe manipulation of laboratory equipment and materials in the field and laboratory. The purpose of this course is to present biology content within a pattern of unifying themes that helps students understand the larger significance of the details they are learning. Students will be asked to think critically about concepts and relate them to the world in which they live.

Summary of course content:

Nature of Biology

Biological classification

Ecology

Microorganisms

Cells and cellular processes

Plants

Genetics

Animals

Evolutionary principles

Human biology

Grading Procedures:

Assessment in this course will be determined from a variety of activities. For each nine weeks, the grade will be determined as specified below. Semester averages are calculated from the first nine weeks (40%), the second nine weeks (40%), and the final exam (20%).

Major Grades: 50%

Tests, Major Labs and Projects, Binder, Other Assignments

Daily Grades: 50%

Quizzes (count twice), Labs, Daily activities, Homework,

Participation, Safety, Other Assignments

A = 90 - 100

B = 80 - 89

C = 75 - 79

D = 70 - 74

F = <70

Academic Integrity:

Any form of cheating, including (but not limited to) plagiarism, copying, forgery, and falsification will not be tolerated in this course. Any student caught cheating will receive a zero for that assignment and a parent/guardian will be notified. Disciplinary action will be taken in accordance with school policy.

Classroom Assignments / Worksheets:

Classroom assignments, along with due dates, will be written on the board each day. They may be warm-up activities, Worksheets, Laboratories, or Assigned activities. It is the student's responsibility to write down each assignment, complete it, and submit it on the due date. Homework assignments are due at the **BEGINNING** of class on the due date. Assignments submitted later in the class period or later in the day are considered late.

Late Work and Eliminate Zeroes (EZ):

Daily work will be accepted 1 day late with a 30 point deduction. Students who do not turn in their daily assignments on time must attend an EZ Lunch Tutorial. The EZ Mandatory Lunch Tutorials program is designed to allow students an extra opportunity to turn in missing assignments to replace zeros in the grade book. Students are responsible for bringing their work with them to the EZ Tutorial session. Students will take their assignments with them when they leave the EZ Tutorial and must turn in the assignment to the teacher at the beginning of class the day after the EZ Tutorial otherwise they will retain the zero. All assignments turned in following EZ Tutorial attendance will be subject to the late work penalty. **Failure to bring work to the EZ tutorial or not attending the EZ tutorial will result in disciplinary consequences assigned by their principal.** Major grades will be accepted up to 3 days late, for 10 points off each day late. On the fourth day, the assignment will be a zero.

Absences:

If an absence is anticipated, please notify the teacher early enough to receive assignments ahead of time. If the absence is not anticipated, it is your responsibility to gather the assignments that you missed on the day of your return. Students have 1 day for each day absent to make up the work and turn it in. It is the student's responsibility to come and ask the teacher what he/she missed while absent. It is not the teacher's responsibility to make a student do his or her work. **If a student is absent the day of a test or quiz, it must**

Fundamentals of Systems Biology Markus W. Covert, 2017-10-19 For decades biology has focused on decoding cellular processes one gene at a time but many of the most pressing biological questions as well as diseases such as cancer and heart disease are related to complex systems involving the interaction of hundreds or even thousands of gene products and other factors How do we begin to understand this complexity Fundamentals of Systems Biology From Synthetic Circuits to Whole cell Models introduces students to methods they can use to tackle complex systems head on carefully walking them through studies that comprise the foundation and frontier of systems biology The first section of the book focuses on bringing students quickly up to speed with a variety of modeling methods in the context of a synthetic biological circuit This innovative approach builds intuition about the strengths and weaknesses of each method and becomes critical in the book's second half where much more complicated network models are addressed including transcriptional signaling metabolic and even integrated multi network models The approach makes the work much more accessible to novices undergraduates medical students and biologists new to mathematical modeling while still having much to offer experienced modelers whether their interests are microbes organs whole organisms diseases synthetic biology or just about any field that investigates living systems
