 Newcomb,2009-01-01 Geology coalesced as a discipline in the early part of the nineteenth century with the coming together
 of many strands of investigation and thought The theme of experimentation and or instrument aided observation is absent
 from most recent accounts of that time which rely on an admixture of theory and field observations informed by close
 examination of minerals James Hutton emerged as the person who had it right with suggestion of a central heat source for
 Earth while Abraham Gottlob Werner and his Neptunist supporters were derided as being blinded by overarching belief as
 opposed to sober application of observed facts However despite several claims that Hutton had won the day primary
 literature from both England and the Continent reveals that the question was by no means settled for decades after Hutton
 derided information derived from looking into a little crucible This Special Paper makes the case that it was just those
 parameters of heat pressure solution and composition discovered in the laboratory that prevented resolution of the
 overriding questions about rock origin English Mechanic and World of Science ,1878 **The Publishers' Trade List**
