Scientific Computing with MATLAB and Octave Alfio Quarteroni, Fausto Saleri, 2007-06-21 Preface to the First Edition This textbook is an introduction to Scientific Computing We will illustrate several numerical methods for the computer solution of certain classes of mathematical problems that cannot be faced by paper and pencil We will show how to compute the zeros or the integrals of continuous functions solve linear systems approximate functions by polynomials and construct accurate approximations for the solution of differential equations With this aim in Chapter 1 we will illustrate the rules of the game that computers adopt when storing and operating with real and complex numbers vectors and matrices In order to make our presentation concrete and appealing we will adopt the programming environment MATLAB as a faithful companion We will gradually discover its principal commands statements and constructs We will show how to execute all the algorithms that we introduce throughout the book This will enable us to furnish an immediate quantitative assessment of their theoretical properties such as stability accuracy and complexity We will solve several problems that will be raised through exercises and examples often stemming from scientific applications

Perturbed Gradient Flow Trees and A_∞ -algebra Structures in Morse Cohomology Stephan Mescher, 2018-04-25 This book elaborates on an idea put forward by M Abouzaid on equipping the Morse cochain complex of a smooth Morse function on a closed oriented manifold with the structure of an A_∞ algebra by means of perturbed gradient flow trajectories This approach is a variation on K Fukaya's definition of Morse A_∞ categories for closed oriented manifolds involving families of Morse functions To make A_∞ structures in Morse theory accessible to a broader audience this book provides a coherent and detailed treatment of Abouzaid's approach including a discussion of all relevant analytic notions and results requiring only a basic grasp of Morse theory In particular no advanced algebra skills are required and the perturbation theory for Morse trajectories is completely self contained In addition to its relevance for finite dimensional Morse homology this book may be used as a preparation for the study of Fukaya categories in symplectic geometry It will be of interest to researchers in mathematics geometry and topology and to graduate students in mathematics with a basic command of the Morse theory
