Repositories for Print Pentti Vattulainen, Steve O'Connor, 2018-03-05 Repositories for low use books have long existed for the larger cultural institutions across the globe Libraries have long been strong developers of off site storage This need has evolved for libraries because of their continuous collection of print materials as a record of the intellectual and cultural output of different cultures Libraries have had this role described neatly and executed as a clear professional role This new book will primarily examine two aspects of this role Firstly the organisational and technological responses to this evolving role will be explored and secondly the wide breadth of strategic responses to challenges of digital will be detailed In this authors to this edited volume will describe their work for libraries but increasingly for Galleries Archives and Museums The papers are drawn from Europe United Kingdom the United States and Australasia The organisational models discussed in the book provide clear illustration of imaginative responses to the plight of the individual institutional library New organisational models are shaping the way in which business can be done in times of change The pressures today on all cultural institutions are similar and so there is a new convergence of similar need and similar solutions This book is an acknowledgment that there are a wide variety of strategic organisational and technological responses to the retention of cultural objects whether they be books art records or other cultural objects It is illustrative of the power of good lateral thinking and planning by professionals of the power of international networks and of convergence in response to need The book will be an edited with a future perspective by Pentti Vattulainen and Steve O Connor who have had significant experience in this area internationally

Discoverability in Digital Repositories Liz Woolcott, Ali Shiri, 2023-04-04 While most discoverability evaluation studies in the Library and Information Science field discuss the intersection of discovery layers and library systems this book looks specifically at digital repositories examining discoverability from the lenses of system structure user searches and external discovery avenues Discoverability the ease with which information can be found by a user is the cornerstone of all successful digital information platforms Yet most digital repository practitioners

and researchers lack a holistic and comprehensive understanding of how and where discoverability happens This book brings together current understandings of user needs and behaviors and poses them alongside a deeper examination of digital repositories around the theme of discoverability It examines discoverability in digital repositories from both user and system perspectives by exploring how users access content including their search patterns and habits need for digital content effects of outreach or integration with Wikipedia and other web based tools and how systems support or prevent discoverability through the structure or quality of metadata system interfaces exposure to search engines or lack thereof and integration with library discovery tools Discoverability in Digital Repositories will be particularly useful to digital repository managers practitioners and researchers metadata librarians systems librarians and user studies usability and user experience librarians Additionally and perhaps most prominently this book is composed with the emerging practitioner in mind Instructors and students in Library and Information Science and Information Management programs will benefit from this book that specifically addresses discoverability in digital repository systems and services

code *Emerging Web Services Technology Volume III* Walter Binder, Schahram Dustdar, 2009-11-23 This third volume on Emerging Web Services Technologies follows the current search activities in the areas of Web Services and Service Oriented Architectures. It includes the proceedings of the 3 Workshop on Emerging Web Services Technology 2008 WEWST 08 which was colocated with the 6 European Conference on Web Services ECOWS 08 and took place in November 2008 in Dublin Ireland. In addition, this volume features three papers from the ECOWS 08 business track. WEWST focuses on research contributions advancing the state of the art in Web Services technologies. The main goal of the WEWST workshop is to serve as a forum for providing early exposure and much needed feedback to grow and establish original and emerging ideas within the Web Services community. The wide variety of tools, techniques, and technological solutions presented in WEWST share one common feature: they advance the current Web Services research in new directions by introducing new, sometimes controversial ideas into the field. As such, WEWST is the natural extension to the main ECOWS conference. For this edition of WEWST, we accepted 6 full papers and 3 short papers. We would like to thank the paper authors for their submissions and for their contribution to the timely preparation of these proceedings as well as for their presentations and lively discussions during the workshop. At the same time, we would like to thank our Program Committee for their work and for submitting the reviews on time. Last but not least, we would like to thank the ECOWS conference organizers for their help organizing a successful workshop.

Pivotal Certified Spring Enterprise Integration Specialist Exam Lubos Krnac, 2015-11-13 Exam topics covered include tasks and scheduling, remoting the Spring Web Services framework, RESTful services with Spring MVC, the Spring JMS module, JMS and JTA transactions with Spring, batch processing with Spring Batch, and the Spring Integration framework. Prepare with confidence for the Pivotal Enterprise Integration with Spring Exam. One of the important aspects of this book is a focus on new and modern abstractions provided by Spring. Therefore, most of the features are shown with Java annotations alongside established XML configurations. Most of the examples in the book are also based on the Spring Boot framework. Spring Boot adoption is exponential because of its capability to significantly simplify Spring configuration using sensible, opinionated defaults. But Spring Boot is not the target of the exam; therefore, all the features are also covered with plain Spring configuration examples. How to use Spring to create concurrent applications and schedule tasks. How to do remoting to implement client-server applications. How to work with Spring Web Services to create loosely coupled Web services and clients. How to use Spring MVC to create RESTful web services and clients. How to integrate JMS for asynchronous messaging-based communication. How to use local JMS transactions with Spring. How to configure global JTA transactions with Spring. How to use Spring Integration to create event-driven pipes and filters, architectures, and integrate with external applications. How to use Spring Batch for managed, scalable batch processing that is based on both custom and built-in processing components.
