The book features contributions from researchers with both academic and industrial experience. It is organized into three parts, each focusing on different aspects of applying NLP to RE. Part I: NLP for Downstream RE Tasks delves into the application of NLP techniques to tasks that are typically part of the RE process. System Validation and Verification Jeffrey O. Grady,1997-11-25 Historically the terms validation and verification have been very loosely defined in the system engineering world with predictable confusion Few hardware or software testing texts even touch upon validation and verification despite the fact that properly employed these test tools offer system and test engineers powerful techniques for identifying and solving problems early in the design process Together validation and verification encompass testing analysis demonstration and examination methods used to determine whether a proposed design will satisfy system requirements System Validation and Verification clear definitions of the terms and detailed information on using these fundamental tools for problem solving It smoothes the transition between requirements and design by providing methods for evaluating the ability of a given approach to satisfy demanding technical requirements With this book system and test engineers and project managers gain confidence in their designs and lessen the likelihood of serious problems cropping up late in the program In addition to explanations of the theories behind the concepts the book includes practical methods for each step of the process examples from the author s considerable experience and illustrations and tables to support the ideas Although not primarily a textbook System Validation and Verification is based in part on validation and verification courses taught by the author and is an excellent supplemental reference for engineering students In addition to its usefulness to system engineers the book will be valuable to a wider audience including manufacturing design software and risk management project engineers anyone involved in large systems design projects
