**install this program** Pieter van Heerden,2004 Water storage Water requirements Water harvesting Irrigation management Irrigated farming Estimation Irrigation requirements Computer software Computer models      **Sustainable Options** J. N. Blignaut,Martin P. De Wit,2004 This well researched important text argues a case for the use of environmental resource economics ERE as an analytic framework for the conceptualisation and design of sustainable policy options Sustainable options integrates economic theories and concepts on the one hand with social and environmental challenges on the other Applying ERE in a developing context like that of South Africa is critical given the country s dependence on natural and environmental assets The sustainability of the economy and the welfare of the country s people are at stake Environmental management is therefore an economic concern This is illustrated clearly in the first section of the book which examines a broad range of welfare indicators thus providing an overview of the macroeconomic performance of the South African economy Sustainable options is not only for academics and students from the economic political and biophysical sciences The book s hands on approach and explicit linkages to the real world of economic development makes it invaluable for policy makers and environmental practitioners faced with the daunting task of making trade offs between developmental and environmental concerns      Water as an Inescapable Risk Anja du Plessis,2018-12-15 The book presents an interdisciplinary systematic evaluation of increasing water stress and scarcity over the globe and specifically South Africa South Africa is used as the prime example as the country is experiencing similar water challenges in terms of availability and quality as most regions across the globe Water availability is predominantly used to illustrate water scarcity however continued degradation of the world s freshwater resources by a multitude of natural and anthropogenic factors have consequently exacerbated water stress and scarcity due to it being of insufficient quality for various uses The increase of water scarcity through both natural and anthropogenic factors has in turn led to water being viewed as an increasing risk within all spheres Water as a source of conflict has come to the forefront especially within regions which struggle to meet the increasing demands from different water users and trying to achieve future sustainability of the resource The increase of water scarcity and stress as well as the continued pressure of population and economic growth has brought various new challenges into play This book focuses on water as an increasing risk over the globe and specifically South Africa by reviewing both water availability and quality evaluating water as a global and national risk The book concludes by focusing on current limitations necessary strategic actions as well as possible policy related changes which may be required to adapt to future water challenges and to lessen water as an increasing risk      **Statute Law of the Transvaal 1839-1910 (in Force on 31st May, 1910)** Transvaal (Colony),1910      **Siviele Ingenieur in Suid-Afrika** ,1984      *South Africa, Past and Present* John Noble,1877      *The Ecology of River Systems* Bryan R. Davies,Keith F. Walker,2013-03-09 Our understanding of the ecology of running waters has come a long way during the past few years From being a largely descriptive subject with a few under tones concerned with such things as fisheries pollution or control of blackflies it has evolved into a discipline with hypotheses such as the

River Continuum Concept Vannote et al 1980 and even a book suggesting that it offers opportunity for the testing of ecological theory Barnes Minshall 1983 However perusal of the literature reveals that although some of the very early studies were concerned with large rivers references in Hynes 1970 the great mass of the work that has been done on running water has been on streams and small rivers and information on larger rivers is either on such limited topics as fisheries or plankton scattered among the journals or not available to the general limnologist The only exceptions are a few books in this series of publications such as those on the Nile Rz6ska 1976 the Volga Morduckai Boltovskoi 1979 and the Amazon Sioli 1984 and the recent compendium by Whitton 1984 on European rivers among which there are a few that rate as large
