**Quantitative Research Module 2**  
**LESSON 1: DESIGNING RESEARCH TOPIC**

**WHAT I NEED TO KNOW**

The first and foremost step in the research is selecting and properly defining a research problem. Before starting a laborious journey of finding the unknown, you need to know first what it is that you want to find out, where and how you are going to find the answers to your questions, and what specific qualities are you looking for. For instance, you want to find a specific kind of fish in the ocean; however, the ocean is so vast that it is almost impossible for you to achieve that goal of finding the fish without equipping yourself with the right tools and information about it. You may need to know first its behavior and living conditions before you can precisely pinpoint the perfect spot to find the fish. Thus, baseline information is needed for a successful quest.

That fish analogy can be applied to finding a research topic. A well-defined research topic is essential for a successful research. When the topic is not well-defined, it becomes unmanageable and may result in some drawbacks during data collection and analysis that could compromise the strength of your study.

Hence, choosing a topic must undergo proper and thorough planning and designing. The four basic steps in designing a research topic are the following: (1) choose a broad topic, (2) do preliminary research, (3) define the problem, and (5) refine the question. Guided with these steps, a student researcher can certainly jumpstart a quantitative research project.

**WHAT IS IT**

**Steps in Developing Research Topic**

Despite the advancement in knowledge and technology, there is still a lot to discover in this world. There is still an ocean of things that we are yet to explore. It can be a difficult situation that we want to improve or eliminate, a better understanding of the unfamiliar, information gaps we wish to fill, or theories that we want to validate. What limits our choice of a topic are our capacity, understanding, resources, and skill.

Most researchers will agree that choosing a good topic is a challenging and tedious task. Because a research topic serves as the groundwork for any succeeding actions, it must be defined appropriately at the beginning of the research work. Otherwise, it may result in unanticipated complexities to the researcher.

Developing a research problem can be done in four (4) steps:

1. Choose a broad topic
2. Do a preliminary research
3. Define the problem
4. Refine the question

As a student researcher, let us go through these steps to guide us in choosing a quantitative research topic related to our chosen field.

1. **CHOOSE A BROAD TOPIC.** The first step is quite simple. As a Senior High School student, these tips will surely guide you in selecting a broad topic for quantitative research.

A. Choose an interesting topic.

Research is a very challenging task that demands your time and persistence. Your motivation to find the answer to the problem should keep you going, thus building a momentum along the way. Therefore, your research topic must be something that you are passionate about. Review your answers in activity 1, and it might lead you to the right path. After all, nothing is more satisfying than accomplishing something that matters to you.

B. Select a significant topic.

A topic that is worth researching must be able to answer or solve problems in the community. No one will take an interest in your topic if it is obsolete and does not address any real problem. To be proactive and to take part in solving problems with socio-economic relevance gives a sense of accomplishment. You do not even have to look far, just take a look at your household, neighborhood, school, group of friends, or local community for a common problem or difficulty. Activity 2 will help you identify some main points that can serve as a basis for choosing your research study.

C. Choose a topic relevant to your field.

One of the goals of this course is for you to be able to produce a quantitative research study that is aligned to your chosen track. A SHS student under ABM must choose a topic related to business and management while students taking HUMSS may consider choosing a topic about politics, culture, and arts. Choosing a topic that you can relate will certainly make your research project less challenging.

In the event, that the three tips above do not shed some light on your minds, do not despair; other sources of ideas like the ones below may be available for you.
