AUTHOR'S FINAL DRAFT

Abstract

Research with infants presents a unique set of challenges, both practical and theoretical. This chapter combines extensive practical advice with a comprehensive survey of a broad range of infant paradigms. We discuss how to make the most of an infant's visit and to ensure it runs smoothly. We survey classic paradigms based on looking time measures and modern advances on these made possible by infant eyetracking. We briefly discuss infant EEG and other emerging methods. Throughout we draw examples from a large range of cognitive domains and provide extensive references to classic experiments and methodology papers.

Three Practical Tips

- "The baby is always right" - Work to the infant's own schedule.
- "Parents know their babies" - Involve the parents and listen to them.
- "Collect lots of data in parallel" - Prefer rich, multimodal data and always video your experiments.
