Parvathy, Dr. Uma Rajmohan, Dr. Pushpa Sharma, 2023-05-18 Research in its broadest sense may be thought of as the process of systematically collecting and analyzing data to gain a deeper understanding of a topic The research employs methodical approaches to address theoretical and applied concerns Studiously inquiring or examining investigating or experimenting to discover interpret facts revise the accepted theories or laws in light of the new facts or put such new or revised theories or laws into practical application is how the Oxford English Dictionary defines research Some individuals see research as a progression one that moves from the familiar to the unfamiliar Inquisitiveness is a fundamental human trait since it compels us to wonder and investigate to get a deeper and deeper grasp of the world around us Curiosity is the seed from which all knowledge grows and the process by which humans learn about the world is what we call study The word research must be used in a specialized context since it refers to a scholarly endeavour Therefore research is the original addition to the body of knowledge that contributes to its development Science is the methodical investigation of the world via the use of analogy comparison and experiment Research in a nutshell is the pursuit of answers to questions via the use of a methodical objective process Research also includes the methodical process of drawing broad conclusions and developing a hypothesis Research Methodology Ranjit Kumar, 2005-07-15 This practical book is designed for anyone new to research who is planning to undertake a research project for the first time Organised around eight operational steps the text explains difficult procedures step by step

Rajendra Kumar, 2008-01-01

*RESEARCH METHODOLOGY THEORY & TECHNIQUES* Shrikant Patel, S. R. Jena, Abhijit Gupta, Dr. Pankaj Lathar, 2023-05-03 The goal of conducting research that is descriptive is to offer a description of the subject under investigation For a product that has just been released for example the characteristics of consumers may be stated in terms of the degree to which product usage varies with factors such as income age gender and other characteristics In another example the characteristics of consumers may be stated in terms of the degree to which product usage changes over time In order to generate the most possible revenue a descriptive study needs to collect data for a certain purpose A single hypothesis should be used as the guiding principle whenever descriptive investigations produce varying degrees of agreement It makes it possible to test both implicit and explicit hypotheses however the specifics of how this is done depend on the area of study that is being conducted For instance a corporation that deals in petroleum would find that its sales had decreased The company is able to draw this conclusion based on the feedback it receives from the market which indicates

that economically challenged households do not purchase the company's oil for use in the kitchen. After then, one may perhaps do descriptive research in order to put such a theory to the test. The phase of research described as the act of modifying one or more variables under the conditions in which the data that indicates the effects will be collected is referred to as experimentation. The term experimentation refers to this phase of research. Experiments will create artificial situations in order to supply the researcher with the precise data required for the study as well as the methods to properly measure that data. This will be accomplished by fabricating fictitious conditions. Experiments are considered to be artificial due to the fact that the conditions in which they are conducted are frequently constructed for the sole purpose of carrying out the experiment. Because doing so grants the researchers a greater degree of control over the factors that are the subject of their investigation, the experimental places a heavy emphasis on the use of artificial components. They will be in a position to gather more convincing evidence of the cause and effect linkages that exist between the variables if they are able to exercise control over those factors that are components of a particular scenario. Therefore, the ability to create a scenario with the express purpose of observing and accurately recording the effect that a deliberate change in another factor has on a first factor enables researchers to accept or reject hypotheses with an absolute certainty that is beyond the realm of reasonable doubt.
