

## Example Of Respect Research Paper

### Respect in our Lives

Respect. Something our world would be chaotic without. Even though not everyone gives respect vividly, I think our community has enough to get by.

Our community has respect in most places. For example, the school for the public library. There could be [respect](#) in many different places. The bowling alley is a place to show respect. You take off your shoes when you go on the wooden floor. You should untie your shoes when you are done bowling and turn them in to the person at the counter. There are some places that could receive more courtesy, for example the movie theater. There are people who talk to their neighbors or keep their phones on during the movie. By being quiet and turning off phones, people could show more respect.

We can show respect anywhere. Many people who go to the olympics have to show respect to one another. Showing good sportsmanship to the other competitor who just beat them for the gold medal. The olympians from America have to show respect to the people from other countries and vise versa. If you watch the olympics you see people who don't know each other from different countries hugging each other. This is showing sportsmanship to another countries' athletes knowing that they have worked hard for this specific worldwide event. [...show more content...](#)

People could also help the world by trying to recycle more or not polluting the ocean by throwing trash in it. Recycling as much paper as you can will save trees and not as much plastic and recyclable things will be piled up on the landfill. Polluting the ocean means the fish see plastic and eat it. Then we catch the fish and eat the fish, but also the plastic fragments that the fish ate when it was swimming in the ocean. If you don't pollute the ocean you're showing respect to the planet and making it healthier for yourself. I know that I don't want to eat

**Project Set Strategies** F.G.J. Derkinderen,R.L. Crum,2012-12-06 Project Set Strategies focuses on an issue of vital concern to corporate managers the development and implementation of strategy Regretfully this topic has received too little attention in the literature of finance and has been treated in completely in the management journals In fact not everyone recognizes that it falls within the sphere of finance However since the important issues discussed in this book strategically shape the destiny of the company and can seal its fate long before the point is reached where conventional finance considerations come into play it is essential that this recognition be acknowledged From the management point of view it has long been realized that strategic elements play a crucial role in the continued well being of the firm Nevertheless this truth is overlooked to some extent with most management techniques since there is insufficient typification often leading to unjustified generalizations and inadequate attention to the requirements of the specific situation Also these management techniques are not grounded upon the long established financial economic theories of valuations and thus can lead to misdirected guidance Since the two academic disciplines of management and finance have much insight to offer each other this book represents an effort to link the strategic management area to a theoretically sound and usable financial economic foundation In this way the probability of errors of omission or unjustified generalizations is decreased and help is offered for ascertaining more relevant goal directed recommendations

**Knowledge Engineering: Practice and Patterns** Philipp Cimiano,H. Sofia Pinto,2010-11-18 Knowledge Management and Knowledge Engineering is a fascinating field of research these days In the beginning of EKAW the modeling and acquisition of knowledge was the privilege of or rather a burden for a few knowledge engineers familiar with knowledge engineering paradigms and knowledge representation formalisms While the aim has always been to model knowledge declaratively and allow for reusability the knowledge models produced in these early days were typically used in single and very specific applications and rarely changed Moreover these models were typically rather complex and they could be understood only by a few expert knowledge engineers This situation has changed radically in the last few years as clearly indicated by the following trends The creation of even formal knowledge is now becoming more and more collaborative Collaborative ontology engineering tools and social software platforms show the potential to leverage the wisdom of the crowds or at least of the many to lead to broader consensus and thus produce shared models which qualify better for reuse A trend can also be observed towards developing and publishing small but high impact vocabularies e.g FOAF DublinCore GoodRelations rather than complex and large knowledge
