Research Paper Topics On Genetics:

Novel Insights into the Genetics of Growth Disorders Mara Giordano, Liborio Stuppia, 2022-08-01 *Race in the College Classroom* Maureen T. Reddy, Bonnie TuSmith, 2002 Winner of the 2003 American Educational Studies Association Critics Choice Awards Winner of the 2003 Gustavus Myers Outstanding Book Award Did affirmative action programs solve the problem of race on American college campuses as several recent books would have us believe If so why does talking about race in anything more than a superficial way make so many students uncomfortable Written by college instructors from many disciplines this volume of essays takes a bold first step toward a nationwide conversation Each of the twenty nine contributors addresses one central question what are the challenges facing a college professor who believes that teaching responsibly requires an honest and searching examination of race Professors from the humanities social sciences sciences and education consider topics such as how the classroom environment is structured by race the temptation to retreat from challenging students when faced with possible reprisals in the form of complaints or negative evaluations the implications of using standardized evaluations in faculty tenure and promotion when the course subject is intimately connected with race and the varying ways in which white faculty and faculty of color are impacted by teaching about race **The Least Cost**

Path From Landscape Genetics to Landscape Genomics Samuel A. Cushman, Andrew J. Shirk, Glenn T. Howe, Melanie A. Murphy, Rodney J. Dyer, Stéphane Joost, 2018-08-03 Ecosystems are the stage on which the play of evolution is acted and ecosystems are complex spatially structured and temporally varying The purpose of this Research Topic is to explore critical challenges and opportunities for the transition from landscape genetics to landscape genomics Landscape genetics has focused on the spatial analysis of small genetic datasets typically comprised of less than 20 microsatellite markers taken from clusters of individuals in putative populations or distributed individuals across landscapes The recent emergence of large scale genomic datasets produced by next generation sequencing methods poses tremendous challenge and opportunity to the field Perhaps the greatest is to produce process curate archive and analyze spatially referenced genomic datasets in a way such that research is led by a priori hypotheses regarding how environmental heterogeneity and temporal dynamics interact to affect gene flow and selection The papers in the Research Topic cover a broad range of topics under this area of focus from reviews of the emergence of landscape genetics to best practices in spatial analysis of genetic data The compilation like the emerging field itself is eclectic and illustrates the scope of both the challenges and opportunities of this emerging field
