3.17	<i>Investigate the preparation of pure, dry hydrated copper sulfate crystals starting from copper oxide including the use of a water bath</i>	Excess copper oxide must be added to warm dilute sulfuric acid (warmed using a water bath), which will react to produce a blue solution of the salt copper(II) sulfate. The solution then needs to be filtered using filter paper and evaporated using an evaporating basin and Bunsen burner, followed by final drying using a watch glass to allow all the water to evaporate.
