Plant Diversity and Ecology in the Chihuahuan

Desert Maria C. Mandujano, Irene Pisanty, Luis E. Eguiarte, 2020-07-18 Environmental and specific diversity in the Chihuahuan desert in general and in the Cuatro Ci negas Basin in particular has long been recognized as outstanding This book provides a global ecological overview together with in depth studies of specific processes The Chihuahuan desert is the warmest in North America and has a complex geologic climatic and biogeographical history which affects today s distribution of vegetation and plants and generates complex phylogeographic patterns The high number of endemic species reflects this complex set of traits The modern distribution of environments including aquatic and subaquatic systems riparian environments gypsum dunes and gypsum rich soils low levels of phosphorous and organic matter and high salinity combined with an extreme climate call for a range of adaptations Plants are distributed in a patchy pattern based on punctual variations and many of them respond to different resources and conditions with considerable morphological plasticity In terms of physiological morphological and ecological variability cacti were identified as the most important group in specific environments like bajadas characterized by high diversity values while gypsophytes and gypsovaques of different phylogenies including species with restricted distribution and endemics

The Evolution of Insect Life Cycles Fritz Taylor, Richard Karban, 2012-12-06 This book was developed out of a symposium at the XVII International Congress of Entomology held in Hamburg Germany on August 21 1984 This symposium was organized by Drs William Bradshaw and Hugh Dingle who subsequently asked us to edit the proceedings The chapters represent for the most part papers that were read in Hamburg but have been expanded and updated The goal of this volume is to provide a comprehensive view of current research on insect life cycles including field and laboratory studies broad comparisons among species or local populations and intensive studies of single populations as well as theoretical research Of necessity given the magnitude of research now being carried out on insects some important research programs are not included and therein lie the makings of future volumes This volume is divided into three parts The first part Geographical Patterns in Insect Life Cycles explores various applications of a comparative method that has been valuable in investigating the potential for variability in life history parameters and the relation of these parameters to important variables in the environment

Biodiversity and the livestock sector - Guidelines for quantitative assessment Food and Agriculture Organization of the United Nations , 2020-06-01 The Technical Advisory Group TAG on biodiversity hereafter called Biodiversity TAG is composed of 25 international experts in ecology biodiversity indicators agronomy life cycle assessment livestock production systems and environmental science Their backgrounds complementary between systems and regions allowed them to understand and address different perspectives The aim of the methodology developed in these guidelines is to introduce a harmonized international approach for assessing the impacts of livestock on biodiversity The livestock sector is a major user of natural resources land in particular and an important contributor to pollution e g causing nutrient losses increasing greenhouse gas

emissions which makes it one of the sectors with the highest impact on biodiversity At the same time livestock production is one of the few sectors with not only negative but also positive impacts on biodiversity therefore the sector can pull two levers to improve its biodiversity performance mitigate harm and maximize benefits Many environmental assessments of the livestock sector have not addressed biodiversity because of its intrinsic complexity These guidelines strive to include biodiversity in environmental assessments in order to increase the understanding of the impacts of livestock on biodiversity and to reveal possible synergies or trade offs with other environmental criteria or Sustainable Development Goals SDGs Several indicators in these guidelines are also of relevance for the UN Decade on Ecosystem Restoration Plant Diversity -
