Dictionary of XML Technologies and the Semantic Web Vladimir Geroimenko, 2012-12-06. The emerging Second Generation Web is based entirely on XML and related technologies. It is intended to result in the creation of the Semantic Web, on which computers will be able to deal with the meaning semantics of Web data and hence to process them in a more effective and autonomous way. This new version of the Web introduces a multitude of novel concepts, terms, and acronyms: Purpose, Scope, and Methods. This dictionary is an effort to specify the terminological basis of emerging XML and Semantic Web technologies. The ultimate goal of this dictionary is even broader than just to define the meaning of new words; it aims to develop a proper understanding of these leading-edge technologies. To achieve this, comprehensible definitions of technical terms are supported by numerous diagrams and code snippets, clearly annotated and explained. The main areas covered in this dictionary are: 1. XML syntax and core technologies such as Namespaces, Infoset, and XML Schema; 2. all the major members of the XML family of technologies such as XSLT, XPath, and XLink; 3. numerous XML-based domain-specific languages such as NewsML, News Markup Language; 4. the concept and architecture of the Semantic Web; 5. key Semantic Web technologies such as RDF, Resource Description Framework, RDF Schema, and OWL, Web Ontology Language; and 6. Web services including WSDL, Web Services Description Language, and SOAP, Simple Object Access Protocol. **Pro Jakarta Commons** Harshad Oak, 2004-03-10. Only book first to market to focus exclusively on Jakarta Commons. Focuses on the most stable and popular components that can be used in applications now. Many of the Commons projects are poorly documented, so this book provides much-needed information on their use.
