The work presented here is generally intended for engineers educators at all levels industrialists managers researchers and political representatives Offering a snapshot of various types of research conducted within the field of TRIZ in France it represents a unique resource It has been two decades since the TRIZ theory originating in Russia spread across the world Every continent adopted it in a different manner sometimes by glorifying its potential and its perspectives the American way sometimes by viewing it with mistrust and suspicion the European way and sometimes by adopting it as is without questioning it further the Asian way However none of these models of adoption truly succeeded Today an assessment of TRIZ practices in education industry and research is necessary TRIZ has expanded to many different scientific disciplines and has

allowed young researchers to reexamine the state of research in their field To this end a call was sent out to all known francophone research laboratories producing regular research about TRIZ Eleven of them agreed to send one or more of their postdoctoral researchers to present their work during a seminar regardless of the maturity or completeness of their efforts It was followed by this book project presenting one chapter for every current thesis in order to reveal the breadth the richness and the perspectives that research about the TRIZ theory could offer our society The topics dealt with e g the development of new methods inspired by TRIZ educational practices and measuring team impact

Derry, 2013-05-13 Highlighting and illustrating several important and interesting theoretical trends that have emerged in the continuing development of instructional technology this book's organizational framework is based on the notion of two opposing camps One evolves out of the intelligent tutoring movement which employs artificial intelligence technologies in the service of student modeling and precision diagnosis and the other emerges from a constructivist developmental perspective that promotes exploration and social interaction but tends to reject the methods and goals of the student modelers While the notion of opposing camps tends to create an artificial rift between groups of researchers it represents a conceptual distinction that is inherently more interesting and informative than the relatively meaningless divide often drawn between intelligent and unintelligent instructional systems An evident trend is that researchers in both camps view their computer learning environments as cognitive tools that can enhance learning performance and understanding Cognitive tools are objects provided by the instructional environment that allow students to incorporate new auxiliary methods or symbols into their social problem solving which otherwise would be unavailable A final section of the book represents researchers who are assimilating and accommodating the wisdom and creativity of their neighbors from both camps perhaps forming the look of technology for the future When the idea of model tracing in a computer based environment is combined with appreciation for creative mind extension cognitive tools and for how a community of learners can facilitate learning a camp is created where AI technologists and social constructivist learning theorists can feel equally at home **Problem Solving ... a Basic**
