Peckol, 2019-04-01 *Embedded Systems A Contemporary Design Tool* Second Edition Embedded systems are one of the foundational elements of today's evolving and growing computer technology From operating our cars managing our smart phones cleaning our homes or cooking our meals the special computers we call embedded systems are quietly and unobtrusively making our lives easier safer and more connected While working in increasingly challenging environments embedded systems give us the ability to put increasing amounts of capability into ever smaller and more powerful devices *Embedded Systems A Contemporary Design Tool* Second Edition introduces you to the theoretical hardware and software foundations of these systems and expands into the areas of signal integrity system security low power and hardware software co design The text builds upon earlier material to show you how to apply reliable robust solutions to a wide range of applications operating in today's often challenging environments Taking the user's problem and needs as your starting point you will explore each of the key theoretical and practical issues to consider when designing an application in today's world Author James Peckol walks you through the formal hardware and software development process covering Breaking the problem down into major functional blocks Planning the digital and

software architecture of the system Utilizing the hardware and software co design process Designing the physical world interface to external analog and digital signals Addressing security issues as an integral part of the design process Managing signal integrity problems and reducing power demands in contemporary systems Debugging and testing throughout the design and development cycle Improving performance Stressing the importance of security safety and reliability in the design and development of embedded systems and providing a balanced treatment of both the hardware and the software aspects Embedded Systems A Contemporary Design Tool Second Edition gives you the tools for creating embedded designs that solve contemporary real world challenges Visit the book s website at <http://bcs.wiley.com/he/bcs/books/action/index.bcsId/11853/itemId/1119457505>

**Problem solving activities in post-editing and translation from scratch** Jean Nitzke, 2019 Companies and organisations are increasingly using machine translation to improve efficiency and cost effectiveness and then edit the machine translated output to create a fluent text that adheres to given text conventions This procedure is known as post editing Translation and post editing can often be categorised as problem solving activities When the translation of a source text unit is not immediately obvious to the translator or in other words if there is a hurdle between the source item and the target item the translation process can be considered problematic Conversely if there is no hurdle between the source and target texts the translation process can be considered a task solving activity and not a problem solving activity This study investigates whether machine translated output influences problem solving effort in internet research syntax and other problem indicators and whether the effort can be linked to expertise A total of 24 translators twelve professionals and twelve semi professionals produced translations from scratch from English into German and monolingually post edited machine translation output for this study The study is part of the CRITT TPR DB database The translation and monolingual post editing sessions were recorded with an eye tracker and a keylogging program The participants were all given the same six texts two texts per task Different approaches were used to identify problematic translation units First internet research behaviour was considered as research is a distinct indicator of problematic translation units Then the focus was placed on syntactical structures in the MT output that do not adhere to the rules of the target language as I assumed that they would cause problems in the monolingual post editing tasks that would not occur in the translation from scratch task Finally problem indicators were identified via different parameters like Munit which indicates how often the participants created and modified one translation unit or the inefficiency InEff value of translation units i e the number of produced and deleted tokens divided by the final length of the translation Finally the study highlights how these parameters can be used to identify problems in the translation process data using mere keylogging data
