

world. According to the theory, America as the market innovator could develop products and export them to other countries.

After repetitive production, the country would focus on imports. Moreover, as the product moves through the life cycle, the producing country tends to focus on foreign direct investment (Appleyard & Steven 2006).

Further Developments of International Product Life Cycle Theory

In addition to early developments, international product life cycle theory has undergone a lot of changes. More developments have been made to improve its efficiency. One of the key changes to the theory was the inclusion of differences between countries. The concept of country differences indicates that various countries are able to trade if they have different innovative approaches, climate, and geographical features (Ball 2008).

The concept of similarity between countries has also been used to enhance the development of the theory. In this case, a product that is produced in one country can perform well in another country with similar features. For example, if a computer is developed in America by Apple, the best place it can sell is Canada since the two countries tend to share similar features (Hill 2007).

Development of the theory has also embraced the concepts of dependence, independence, and interdependence. Dependence refers to a situation where one country relies on another. For example, most developing countries depend on the developed nations for the supply of computer software. Independence refers to a state where one country can produce and buy its own goods (Appleyard & Steven 2006).

International Product Life Cycle: Example from Computer Industry

International product life cycle theory can be applied to the computer industry. Based on stages in the product life cycle, it is evident that computers were first introduced by American companies such as Apple and Microsoft. At the introduction stage the computers were targeted for American markets. Apple and Microsoft produced related products in the same industry.
