The objective of this text is to introduce frontier areas of control technology with an ample number of application examples. It also introduces the simulation platform PCSA Process Control System Analyzer to include senior level worked out examples like multi loop control of exothermic reactor and distillation column. The textbook includes discussions on state variable techniques and analysis MIMO systems and techniques of non linear systems treatment with extensive number of examples. A chapter has been included to discuss the industrial practice of instrumentation systems for important unit operation and processes which ends up with the treatment on Plant wide control. The two state of the art tools of computer based control Micro controllers and Programmable Logic Controllers PLC are discussed with practical application examples. A number of demonstration programs have been offered for basic conception development in the accompanying CD. It familiarizes students with the real task of simulation by means of simple computer programming procedure with sufficient graphic support and helps to develop capability of handling complex dynamic systems. This book is primarily intended for the postgraduate students of chemical engineering and instrumentation and control engineering. Also it will be of considerable interest to professionals engaged in handling process plant automation systems. **KEY FEATURES** Majority of worked out examples and exercise problems are chosen from practical process applications. A complete coverage of controller synthesis in frequency domain provides a better grasp of controller tuning. Advanced control strategies and adaptive control are covered with ample number of worked out examples.
