

## why maths clubs could be beneficial

Graven (2011b) gives four reasons:

1. Remediation work that consolidates mathematical foundations is an urgent requirement for many learners in South African schools and clubs could provide a place for this type of remediation to take place.
2. Clubs could also create opportunities to challenge and extend those learners who are coping at their grade level and perhaps to strengthen their mathematical dispositions and confidence.
3. Clubs could also provide an opportunity to strengthen groups of learners in class, who could serve as catalysts for furthering mathematical proficiency of others in their classes.
4. Clubs could provide extended learning opportunities for learners to work on mathematics in OST.

Subramaniam, 2015-08-01 Mathematics and Science education have both grown in fertile directions in different geographic regions Yet the mainstream discourse in international handbooks does not lend voice to developments in cognition curriculum teacher development assessment policy and implementation of mathematics and science in many countries Paradoxically in spite of advances in information technology and the flat earth syndrome old distinctions and biases between different groups of researchers persist In addition limited accessibility to conferences and journals also contribute to this problem The International Sourcebooks in Mathematics and Science Education focus on underrepresented regions of the world and provides a platform for researchers to showcase their

research and development in areas within mathematics and science education The First Sourcebook on Asian Research in Mathematics Education China Korea Singapore Japan Malaysia and India provides the first synthesized treatment of mathematics education that has both developed and is now prominently emerging in the Asian and South Asian world The book is organized in sections coordinated by leaders in mathematics education in these countries and editorial teams for each country affiliated with them The purpose of unique sourcebook is to both consolidate and survey the established body of research in these countries with findings that have influenced ongoing research agendas and informed practices in Europe North America and other countries in addition to serving as a platform to showcase existing research that has shaped teacher education curricula and policy in these Asian countries The book will serve as a standard reference for mathematics education researchers policy makers practitioners and students both in and outside Asia and complement the Nordic and NCTM perspectives
