NOTE: Before performing maintenance on the detector, notify the proper authorities and the central station that maintenance is being performed and the system will be temporarily out of service. (Disable the timer or system undergoing maintenance to prevent any unwanted alarms, and follow this procedure exactly, referring to Figure 5.)

1. Remove the detector housing from the base by rotating counter-clockwise.
2. Remove the battery from the unit.
3. Wait 30 seconds. (If a remote program power-down sequence, the battery must be removed from detector for a minimum of 30 seconds before continuing to the next step.)
4. Remove the detector cover for turning counter-clockwise.
5. Remove the cover or use canned air to remove any dust or debris.
6. Remove the top half of the sensing/monitoring chamber by lifting straight up (see Figure 5).
7. Vacuum or use canned air to remove any dust or particles that are present on all chamber sections.
8. Replace the top half of the sensing/monitoring chamber by aligning the arrow on the sensing/monitoring chamber with the arrow on the housing. Press down firmly until the sensing/monitoring chamber is fully seated.
9. Replace the detector cover for placing it over the sensing/monitoring chamber and turning it clockwise until it snaps into place.

10. Reinstall the battery into the battery compartment using proper orientation. The red and green LEDs will flash once every 5 seconds for approximately 30 seconds until the power-up cycle is complete.
11. Reinstall the detector and test run the listing system.
12. Notify the central station when the system is back in service.

IMPORTANT: If this procedure is not followed exactly, the detector may indicate a maintenance trouble after the power-up sequence is complete. If this happens, remove the battery for 30 seconds and then reinstall.
