Planners Estimating Guide:

Planner's Estimating Guide Arthur Nelson, 2018-01-03 The United States faces enormous changes in the next 25 years Arthur C Chris Nelson starts this book with a few projections The population will grow by one third to 375 million We will need 60 million new housing units to house these people There will be 60 percent more jobs requiring 50 billion additional square feet of nonresidential space The bottom line is that half of all development in 2030 will have been built since 2000 Nelson estimates the cost of new construction alone to be at least 20 trillion This book gives planning practitioners a powerful tool to help decide where to put this new development It does not advocate one development scenario over another but it revolutionizes the job of estimating land use and facility needs Planner's Estimating Guide offers easy to use formulas and worksheets that are formatted in an Excel workbook on CD ROM and carefully explained in the text They make it easy to figure future requirements for countless scenarios The workbook and text deal with a 20 year planning horizon for a fictitious county but both the time projection and scale are entirely adaptable to myriad local circumstances The program allows you to gather a first impression of future land use needs and revise it to reflect local limitations For example if the landscape in question won't support the land use estimations change the assumptions in the workbook to devise new estimates The workbook shows the implications of growth based on standard assumptions you can change the assumptions as needed to reflect local conditions including public input to see how outcomes change Use the workbook as a model for testing local sensitivities with respect to land supply constraints and changes in policy assumptions The results won't tell you what to do but will reveal the numerical implications of different scenarios The book is written principally for practitioners and also for planning students as a primary or supplementary text Used creatively the powerful tools in Planner's Estimating Guide will help you determine the numerical implications of an almost infinite number of future circumstances that may affect your community

From Mobility to Accessibility Jonathan Levine, Joe Grengs, Louis A. Merlin, 2019-11-15 Levine Grengs and Merlin marshal a compelling case to shift to accessibility oriented planning providing much needed conceptual clarity as to what accessibility is and is not But their book also represents a major step toward transforming accessibility from a vaguely defined aspiration into concrete measures that can guide planning decisions Journal of the American Planning Association In *From Mobility to Accessibility* an expert team of researchers flips the tables on the standard models for evaluating regional transportation performance Jonathan Levine Joe Grengs and Louis A Merlin argue for an accessibility shift whereby transportation planning and the transportation dimensions of land use planning would be based on people s ability to reach destinations rather than on their ability to travel fast Existing models for planning and evaluating transportation which have taken vehicle speeds as the most important measure would make sense if movement were the purpose of transportation But it is the ability to reach destinations not movement per se that people seek from their transportation systems While the concept of accessibility has been around for the better part of a century *From Mobility to Accessibility* shows that the accessibility shift is compelled by the fundamental purpose of transportation The book argues that the shift would be transformative to the practice of both transportation and land use planning but is impeded by many conceptual obstacles regarding the nature of accessibility and its potential for guiding development of the built environment By redefining success in transportation the book provides city planners decisionmakers and scholars a path to reforming the practice of transportation and land use planning in modern cities and metropolitan areas
