*Slick Water* Andrew Nikiforuk,2015-09-05 The fossil fuel industry and

many environmental groups tout hydraulic fracturing fracking as a panacea with slick promises of energy independence greenhouse gas reductions and benefits to local economies Yet the controversial technology which blasts massive volumes of fluids sand and chemicals into rock and coal formations has sparked huge public protests Slick Water tells the shocking inspiring story of one woman s stand to hold government and industry accountable for the damage fracking leaves in its wake After energy giant Encana secretly fracked hundreds of gas wells around her home and her well water turned to a flammable broth Jessica Ernst started asking questions When she put forward evidence that Encana had violated laws by fracturing the community s drinking water aquifer Ernst was falsely tagged as a bomb making terrorist and visited by the government s anti terrorism squad Frightened but undaunted she uncovered a startling history of liability fraud and intimidation along with a willful denial of widespread groundwater contamination Jessica Ernst s remarkable story raises dramatic questions about the role of Big Oil in government society s obsession with rapidly depleting supplies of unconventional oil and gas and the future of civil society Published in Partnership with the David Suzuki Institute     Energy from the Earth Stefan Hirschberg, Stefan Wiemer, Peter Burgherr, 2014-11-19 Switzerland s Energy Strategy 2050 requires energy efficiency to be substantially improved the proportion of fossil fuels in the energy supply to be considerably reduced and nuclear power to be phased out while meeting highly ambitious climate protection targets One of the core implications is the need for a massive increase of the use of renewable sources for electricity generation In this context the Swiss Federal Office of Energy SFOE estimates that by 2050 deep geothermal energy could contribute 4.5 TWh per year to electricity generation in Switzerland which would be a substantial contribution to a projected annual power need of 60 TWh Geothermal energy is attractive because of the very large scale of the resource its expected relatively low CO<sub>2</sub> emissions and its reliable all day domestic availability However the future contribution of deep geothermal energy is subject to major uncertainties How much of this resource can be exploited and at what economic cost What are the environmental and risk related externalities that the public must be willing to bear How does its overall performance compare to competing energy resources And will the regulatory framework and public acceptance be sufficient to allow geothermal energy to provide a significant contribution By way of this major interdisciplinary study already considered a work of reference TA SWISS provides answers to these questions in a comprehensive and balanced way thereby supplying a sound basis for stakeholder decision making     Handbook of Heterocyclic Corrosion Inhibitors Chandrabhan Verma, 2023-12-21 Handbook of Heterocyclic Corrosion Inhibitors presents a comprehensive overview of corrosion inhibition using heterocyclic compounds It covers numerous emerging heterocyclic compound based industrial corrosion inhibitors that are oriented toward minimizing corrosive damages and prevention methods Describing the fundamentals of heterocyclic corrosion and corrosion inhibition the book considers the potential of different series of N heterocycles such as acridine and acridone based carbazole based imidazole and imidazoline based indole and indoline based melamine based etc It presents the corrosion inhibition potential of oxygen and sulfur based
