

The Nail File Crime Aka The Rockina Lab

Purpose:

This activity will simulate the use of restriction enzymes and gel electrophoresis in making DNA fingerprints. Some steps have been eliminated to simplify the procedure. However, this lab will allow the positive identification of the guilty suspect.

Objectives:

1. Students will learn how restriction endonucleases cut DNA at specific base sequences and produce DNA fragments of specific and varying lengths.
2. The students will learn how electrophoresis separates different sized fragments of DNA and how these fragments can form a specific, recognizable pattern.
3. The students will learn the principles behind the use of DNA fingerprinting for the identification of people.

Materials:

3 different dark color pens or colored pencils (red, blue, and green)

The Crime:

Late one night, the famous rock star, Rockina, returned to her luxurious penthouse apartment. As she entered the locked apartment, she noticed that everything in her apartment was a mess - drawers had been emptied out onto the floor; the cushions on the couch were ripped open; and the safe that has been hidden behind an oil painting had been opened. She then noticed that the lights were on in her bedroom.

She stormed into the bedroom and surprised a burglar in the process of removing her magnificent (and expensive) jewelry from its hiding place between the mattresses. Indignant, she jumped on the burglar and tried to stab the person with her nail file. While Rockina managed to inflict a small wound, she was no match for the assailant's knife. In the subsequent struggle, Rockina was killed and the murderer escaped with her jewelry.
