

.351 Winchester Self-Loading

Historical Notes. Introduced in 1907 to replace the .35 SL as a more powerful round for the improved Model '07 Winchester autoloading rifle. This cartridge has always had a certain popularity for police and guard work. It was used to a very limited extent in both WW I and II by the French. The rifle was discontinued in 1937. However, due to demand, American companies are loading the .351 again and the British and Canadians continued to load it.

General Comments. The .351 SL doesn't have very much to offer, even though it is an improvement over the older .35. It

won't qualify as a suitable deer cartridge, although it has been used with indifferent success for that purpose. It is a good medium game cartridge for coyote, mountain lion or animals in that class, but is really too powerful for small game. It is expensive, not accurate enough and too limited in range for varmint shooting. It has been rather popular for Latin American jungle hunting, because at the short ranges involved it has sufficient power for the game encountered there. It has been used quite a bit in the western United States for pest control from low flying, light aircraft. Like the .35, the .351 SL is semi-rimmed and the principal difference is in the .24" longer case of the .351.
