problems while giving an overview of the current state of analysis modelling and control for structronic systems It is a coherent compendium written by leading experts in this new research area and gives readers a sophisticated toolbox that will allow them to tackle the modelling and control of smart structures The inclusion of an extensive up to date bibliography and index makes this volume an invaluable standard for professional reference Because of the large number of contributions to the present volume it has been subdivided into two parts of which this is Part I This book will be of interest to engineers materials scientists physicists and applied mathematicians The synergistic integration of active smart materials structures sensors actuators and control electronics has redefined the concept of structures from a conventional passive elastic system to an active life like structronic structure electronic system with inherent self sensing diagnosis and control capabilities Because of its multi disciplinary nature the development of structronic systems has attracted researchers and scientists from many disciplines such as structures materials control electronics mathematics manufacturing electromechanics and mechanics In practical applications this new structronic system can be used as a component of high performance machines or structural systems or be an integrated structure itself performing designated function s Most common active smart materials such as piezoelectrics shape memory alloys electro and magneto strictive materials and polyelectrolyte gels have been reviewed in Part I Application examples are also provided and research issues reported on While the first part focuses primarily on materials and structures Part II emphasizes control applications and intelligent systems With the information provided in this two volume book scientists and researchers can easily grasp the state of the art of smart materials and structronic systems and are ready to pursue their own research and development endeavors
