*Routledge Handbook of Space Law* Ram Jakhu, Paul Stephen Dempsey, 2016-11-10 This handbook is a reference work providing a comprehensive objective and comparative overview of Space Law. The global space economy reached 330 billion in 2015 with a growth rate of 9 per cent vis vis the previous year. Consequently Space Law is changing and expanding expeditiously especially at the national level. More laws and regulations are being adopted by space faring nations while more countries are adapting their Space Laws and regulations related to activities in outer space. More regulatory bodies are being created while more regulatory diversity from public law to private law is being instituted as increasing and innovative activities are undertaken by private entities which employ new technologies and business initiatives. At the international level Space Law both hard law and soft law is expanding in certain areas especially in satellite broadcasting and telecommunications. The Routledge Handbook of Space Law summarises the existing state of knowledge on a comprehensive range of topics and aspires to set the future international research agenda by indicating gaps and inconsistencies in the existing law and highlighting emerging legal issues. Unlike other books on the subject it addresses major international and national legal aspects of particular space activities and issues rather than providing commentary on or explanations about a particular Space Law treaty or national regulation. Drawing together contributions from leading academic scholars and practicing lawyers from around the world the volume is divided into five key parts: Part I General Principles of International Space Law; Part II International Law of Space Applications; Part III National Regulation of Space Activities; Part IV National Regulation of Navigational Satellite Systems; Part V Commercial Aspects of Space Law. This handbook is both practical and theoretical in scope and may serve as a reference tool to academics, professionals and policy makers with an interest in Space Law. *Global Navigation Satellite System (GNSS) Manual*, 2013

**Spaceports in Europe** Annette Froehlich, 2022-01-01 This book explores how Europe is seeking to enlarge its launching capacities by building additional spaceports on the European continent Various national initiatives are envisaged resulting in a space race in the field of constructing spaceports and building micro launchers However right from the beginning when choosing the launch site land or sea based rocket launches there are various factors relating to international space law European regulations and national rules that must be considered as spaceports are rarely explicitly addressed in current legal and policy frameworks While launching sites used to be operated by governments private commercial initiatives are increasingly entering the field This paradigm shift must be reflected within regulations relating to various aspects of space liability by enlarging the long established terms of the United Nations space treaties to accommodate commercial space flights Questions of permission supervision and control require special liability regulations to avoid detrimental consequences stemming from the concept of launching states in view of the

rise of private driven commercial space activities on a global level Furthermore not only do environmental aspects need to be thoroughly examined but also the concept of critical infrastructure requires special attention from a security perspective to anticipate inter alia cyber attacks For these reasons several European and national regulations may need to be enlarged to apply to the entire space sector using a harmonized approach that has direct implications for the regulations programmes and missions of the European Union and the European Space Agency bearing in mind that the upcoming spaceports in Europe are an essential asset to substantially boost the European New Space **FAR/AIM 2023: Up-to-Date FAA**
