Performance Measurement Luca Quaglini, Stefano Tonchia, 2010-08-24 Business Intelligence BI and Performance Management PM the development and delivery of business insight for users and the management of execution based on that insight are two solution types that promise to bring great value to enterprises Yet most organizations haven't yet realized the elusive benefits of these two important disciplines The reasons for this are manifold However the primary causes are the culture of the organization and its leadership This is a topic which I've addressed at length in my latest book Profiles in Performance Business Intelligence Journeys and the Roadmap for Change The culture and leadership of the organization determines the importance and strategic intent surrounding the use of BI and PM Sadly most organizations lack the motivation to embrace transparency and accountability or to align with the strategy of the organization enabling execution and coordination in unison with the mission However once an organization and its leadership are ready to take a step towards real change creating an environment of openness sharing and alignment with BI and PM as its centerpiece the next question then becomes one of how and where to begin Even with great strategic intent missteps in the development and deployment of BI and PM can cause disillusionment and disappointment lending support to the naysayers of the organization and leading to failure and abandonment of these critical programs Business Intelligence: Concepts, Methodologies, Tools, and Applications Management Association, Information Resources, 2015-12-29 Data analysis is an important part of modern business administration as efficient compilation of information allows managers and business leaders to make the best decisions for the financial solvency of their organizations Understanding the use of analytics reporting and data mining in everyday business environments is imperative to the success of modern businesses Business Intelligence Concepts Methodologies Tools and Applications presents a comprehensive examination of business data analytics along with case studies and practical applications for businesses in a variety of fields and corporate arenas Focusing on topics and issues such as critical success factors technology adaptation agile development approaches fuzzy logic tools and best practices in business process management this multivolume reference is of particular use to business analysts investors corporate managers and entrepreneurs in a variety of prominent industries **Enterprise Performance Intelligence and Decision Patterns** Vivek Kale, 2017-10-05 Vivek Kale has written a great book on performance management that focuses on decision making on continuous incremental improvement and on identifying common patterns in becoming a more intelligent organization James Taylor CEO of Decision Management Solutions and author of Real World Decision Modeling with DMN Introducing the concepts of decision patterns and performance intelligence Vivek Kale has written another important book on the issues faced by contemporary organizations Gary Cokins author of Predictive Business Analytics and Performance Management Integrating Strategy Execution Methodologies Risk and Analytics Enterprise Performance Intelligence and Decision Patterns unravels the mystery of enterprise performance intelligence EPI and explains

how it can transform the operating context of business enterprises It provides a clear understanding of what EPI means what it can do and application areas where it is practical to use The need to be responsive to evolving customer needs and desires creates organizational structures where business intelligence BI and decision making is pushed out to operating units that are closest to the scene of the action Closed loop decision making resulting from a combination of on going performance management with on going BI can lead to an effective responsive enterprise hence the need for performance intelligence PI This pragmatic book Introduces the technologies such as data warehousing data mining analytics and business intelligence systems that are a first step toward enabling data driven enterprises Details decision patterns and performance decision patterns that pave the road for performance intelligence applications Introduces the concepts principles and technologies related to performance measurement systems Describes the concepts and principles related to balance scorecard systems BCS Introduces aspects of performance intelligence for the real time enterprises Enterprise Performance Intelligence and Decision Patterns shows how a company can design and implement instruments ranging from decision patterns to PI systems that can enable continuous correction of business unit behavior so companies can enhance levels of productivity and profitability
