

Introduction

Chapter 1 introduces the general topic of operating systems and a handful of important concepts (multiprogramming, time sharing, distributed system, and so on). The purpose is to show *why* operating systems are what they are by showing *how* they developed. In operating systems, as in much of computer science, we are led to the present by the paths we took in the past, and we can better understand both the present and the future by understanding the past.

Additional work that might be considered is learning about the particular systems that the students will have access to at your institution. This is still just a general overview, as specific interfaces are considered in Chapter 3.

Exercises

- 1.12** In a multiprogramming and time-sharing environment, several users share the system simultaneously. This situation can result in various security problems.
- What are two such problems?
 - Can we ensure the same degree of security in a time-shared machine as in a dedicated machine? Explain your answer.

Answer:

- Stealing or copying one's programs or data; using system resources (CPU, memory, disk space, peripherals) without proper accounting.
 - Probably not, since any protection scheme devised by humans can inevitably be broken by a human, and the more complex the scheme, the more difficult it is to feel confident of its correct implementation.
- 1.13** The issue of resource utilization shows up in different forms in different types of operating systems. List what resources must be managed carefully in the following settings:
- Mainframe or minicomputer systems.
