Walser, 2003-06-26 Integer Optimization addresses a wide spectrum of practically important optimization problems and represents a major challenge for algorithmics The goal of integer optimization is to solve a system of constraints and optimization criteria over discrete variables Integer Optimization by Local Search introduces a new approach to domain independent integer optimization which unlike traditional strategies is based on local search It develops the central concepts and strategies of integer local search and describes possible combinations with classical methods from linear programming The surprising effectiveness of the approach is demonstrated in a variety of case studies on large scale realistic problems including production planning timetabling radar surveillance and sports scheduling The monograph is written for practitioners and researchers from artificial intelligence and operations research *Personnel Literature* United States.
