121. OPERATOR'S CONTROLS.

Operator's controls are illustrated in Figs. 3 through 7.

a. Brakes. Two-shoe, self-energizing mechanical brakes are provided at each rear wheel. They may be operated individually by foot pedals located on the right side of the transmission. Both brakes may be applied by depressing the two pedals with the right foot. Only a slight pressure on the brake pedals is required because of the self-energizing action which automatically increases the engagement pressure at the brake shoes. The brakes may be set by engaging the brake pawl at end of brake control shaft (Figs. 3 and 4). The

brakes may be used individually to assist in making short turns, and both brakes should be applied to bring the tractor to a stop.

b. Throttle Control. The hand-throttle control is located on the right side of the steering column. The throttle controls the engine speed through a flyball mechanical governor.

c. Clutch Pedal. The clutch pedal is located on the left of the transmission housing. The clutch pedal is depressed to release the transmission from the engine. Avoid operating the tractor with the foot resting on the clutch pedal as this results in premature clutch wear.

d. Gearshift Lever. The gearshift lever is on top of the transmission housing and forward of the seat. Fig. 5 shows the position of the lever for the five gear ratios. The gearshift position is marked on the transmission cover plate for all gears.

e. Power Take-off Lever. The power take-off lever (Fig. 3) is part of the inspection plate assembly on the left side of the center housing. In the forward position the power take-off is disengaged. Depress the clutch pedal when engaging or disengaging the power take-off shaft while the engine is running.

f. Hydraulic Control. Constant implement draft and position control are the two types of automatic control incorporated in the Ford tractor hydraulic control.
