

Optima 7000 DV ICP-OES

The Optima™ 7000 DV ICP-OES system brings advanced technology to laboratories requiring flexibility and excellent analytical performance for varied and moderate sample loads. The CCD array detector allows you to collect a complete analyte spectrum at speeds that far exceed competitive systems. Automatic dual viewing ensures the lowest detection limits and the widest working ranges. The Optima 7000 DV is the ideal solution for research and quality assurance laboratories that have a wide variety of samples and lower frequency of analysis.

The custom-designed solid-state CCD array detector, the solid-state RF power supply and the purged optical system provide both superior performance measurement stability and enhanced reliability. This reduces operating costs and ensures your instrument is available when needed. Computer-controlled gas flows and mass-flow control of the nebulizer gas ensure day-to-day reproducibility.

The Optima 7000 DV is significantly different from other ICP instruments. With the power and reliability found only in high-end simultaneous research systems and the flexibility inherent to traditional systems, the Optima 7000 DV is ready for the demands of the 21st century.
