

Education History

From early childhood I was interested in the analysis of many facets of life. I was never quite satisfied with the acceptance of superficial information. The quest to find foundational principles, how things work, inspired me to study developmental science. First mechanical then, went on to study electrical engineering at Tri State University, Angola IN. At the advent of the computer age, in about 1983, it became increasingly obvious that I needed programming skills. I first learned FORTRAN then C++, VISUAL BASIC and ACTIONSCRIPT 3. I studied these languages at UCI and CSULB where I received a "CompTia Certified Professional" status degree in computer science and networking.

The Boeing Company

In 1987 I hired on at the Boeing Company as a Sr. Scientist where I developed portions of the International Space Station and Delta series Rockets. I was awarded a [patent](#) for a tool designed for use by astronauts in outer space applications. Another complete resume has been prepared, on request, to answer detailed information concerning my performance history, at various companies of employment including, secret clearance level activities (on a need to know basis).

The Human Voice

In my earlier years of scientific interest, I was very curious about how the human voice operated to produce sound. Answering an ad in the newspaper lead me to a voice development process developed by ["The Feuchtinger family of Musicians"](#). I studied under Eugene Feuchtinger for three years then later [graduated](#) from the "Perfect-Voice-Institute". Still today this voice development process offers exceptional information about how the vocal organ is constructed and about the development of "correct vocal action." Eugene Feuchtinger Sr. developed the original course of voice study, containing 30 lessons or workbooks. The course was to be administered by his instruction (only), not a "self-help" system of learning. In the year 2011, I personally met up with the family and was given many original Feuchtinger documents.

[The Master Course lessons are available online \(For historical reference only!\)](#)

My Retirement Ambition

After retirement from rocket science in 2006, I went on to study animation programming using Adobe Flash for illustration, and Unigraphics for mechanical mechanism design. My interest in the human vocal organ has been elevated in retirement. For this reason I am now producing animated videos to visually represent vocal organ construction, as teaching aids. I am also writing articles on the proper way to develop both the speaking and singing voice. I believe my new scientific findings will revolutionize the way the human voice will be trained in the future. In the past, attention to vocal organ function was fragmented with emphasis placed indiscreetly. The correct, scientifically derived vocal action (developmental process), will invariably lead to a more complete, well balanced vocal organ. Over time, the entire vocal organ can be transformed into performing "Perfect Vocal Action". Following an exact science is not for the faint of heart. Any goal of value will require concentration and a reasonable amount of effort. Those who are willing to put in the time and effort can enjoy the fruits of their labor, with an exceptionally fine voice.
