**Small Sample Size Solutions** Rens van de Schoot, Milica Miočević, 2020-02-13 Researchers often have difficulties collecting enough data to test their hypotheses either because target groups are small or hard to access or because data collection entails prohibitive costs Such obstacles may result in data sets that are too small for the complexity of the statistical model needed to answer the research question This unique book provides guidelines and tools for implementing solutions to issues that arise in small sample research Each chapter illustrates statistical methods that allow researchers to apply the optimal statistical model for their research question when the sample is too small This essential book will enable social and behavioral science researchers to test their hypotheses even when the statistical model required for answering their research question is too complex for the sample sizes they can collect The statistical models in the book range from the estimation of a population mean to models with latent variables and nested observations and solutions include both classical and Bayesian methods All proposed solutions are described in steps researchers can implement with their own data and are accompanied with

annotated syntax in R The methods described in this book will be useful for researchers across the social and behavioral sciences ranging from medical sciences and epidemiology to psychology marketing and economics     A Life Course Perspective on Health Trajectories and Transitions Claudine Burton-Jeangros,Stéphane Cullati,Amanda Sacker,David Blane,2015-08-11 This open access book examines health trajectories and health transitions at different stages of the life course including childhood adulthood and later life It provides findings that assess the role of biological and social transitions on health status over time The essays examine a wide range of health issues including the consequences of military service on body mass index childhood obesity and cardiovascular health socio economic inequalities in preventive health care use depression and anxiety during the child rearing period health trajectories and transitions in people with cystic fibrosis and oral health over the life course The book addresses theoretical empirical and methodological issues as well as examines different national contexts which help to identify factors of vulnerability and potential resources that support resilience available for specific groups and or populations Health reflects the ability of individuals to adapt to their social environment This book analyzes health as a dynamic experience It examines how different aspects of individual health unfold over time as a result of aging but also in relation to changing socioeconomic conditions It also offers readers potential insights into public policies that affect the health status of a population     **Transhumanism** David Livingstone,2015-09-02 Transhumanism is a recent movement that extols man s right to shape his own evolution by maximizing the use of scientific technologies to enhance human physical and intellectual potential While the name is new the idea has long been a popular theme of science fiction featured in such films as 2001 A Space Odyssey Blade Runner the Terminator series and more recently The Matrix Limitless Her and Transcendence However as its adherents hint at in their own publications transhumanism is an occult project rooted in Rosicrucianism and Freemasonry and derived from the Kabbalah which asserts that humanity is evolving intellectually towards a point in time when man will become God Modeled on the medieval legend of the Golem and Frankenstein they believe man will be able to create life itself in the form of living machines or artificial intelligence Spearheaded by the Cybernetics Group the project resulted in both the development of the modern computer and MK Ultra the CIA s mind control program MK Ultra promoted the mind expanding potential of psychedelic drugs to shape the counterculture of the 1960s based on the notion that the shamans of ancient times used psychoactive substances equated with the apple of the Tree of Knowledge And as revealed in the movie Lucy through the use of smart drugs and what transhumanists call mind uploading man will be able to merge with the Internet which is envisioned as the end point of Kabbalistic evolution the formation of a collective consciousness or Global Brain That awaited moment is what Ray Kurzweil a director of engineering at Google refers to as The Singularity By accumulating the total of human knowledge and providing access to every aspect of human activity the Internet will supposedly achieve omniscience becoming the God of occultism or the Masonic All Seeing Eye of the reverse side of the American dollar bill     *Qualitative Research in Nursing and Healthcare*

ECSM2015-Proceedings of the 2nd European Conference on Social Media 2015 Dr Paula Peres, Dr Anabela Mesquita, 2015-07-06 Complete proceedings of the 2nd European Conference on Social Media Porto Portugal. Published by Academic Conferences and Publishing International Limited. The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02. Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days, months, years and beyond. This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales. Dealing with conceptual time, mental time travel also called mental simulation, self projection, episodic semantic memory, prospection, foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge. Moreover, contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors. But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time? This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa, no less progress and integrative synthesis within and across scientific domains might be facilitated. Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit. As an example it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time, namely the interplay of anticipatory attention and

working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales      Values, Economic Crisis and Democracy Mălina Voicu, Ingvi C. Mochmann, Hermann Dülmer, 2016-01-29 For the past decade European countries have undergone a severe economic crisis with severe consequences both for individuals and for governments Unemployment and rising poverty have compelled individuals to reconsider their own priorities and goals while governments have been forced to rethink social policies on the national level as well as their international economic and political agreements Some countries have been more deeply affected by the crisis than others and the impact of economic shortage on individuals and governments has differed not only because of the different magnitudes of the crisis but also because individuals react differently to the contextual changes This book makes use of cross national survey data to explore the impact of wealth and economic contexts on social values Instead of attempting to explain how aggregate changes occur as previous volumes have done the chapters in this collection focus on micro level effects to interrogate more deeply the interplay between attitudes and values and the way both can change as a result of transformation of economic context This book elaborates on several dimensions of value change the measurement model and the way it changes under the impact of economic shortage the connection between universal value orientations and attitudes towards different objects e g the welfare state immigrants and ethnic groups the effects of economic factors and vulnerability on values and attitudinal orientations how particular political and economic contexts produce changes in political orientations This book focuses on the interrelationship of social values attitudes and economic scarcity in the context of the last economic crisis experienced by many European countries It will appeal to scholars and students of sociology political science and economics      **ECGBL 2022 16th European Conference on Game-Based Learning** Conceição Costa, 2022-10-06
