

1. There was no organization in the instructions. The instructions should be written in a "... basic three-part structure of introduction, body, and conclusion" (Korner 2011). The instructions provided above failed all three, with one exception. There's no instruction on how to turn on the device. There's no review of instructions or how to implement provided in the conclusion.
2. There is no defined audience for these instructions. With a clear audience, that will depict the "... the level of familiarity your readers have with the topic" (Korner). If the target audience is for people who are familiar with technology, the instructions don't have to go as in-depth as detail oriented if the target audience was asked for people that are not as tech-savvy. Then the instructions would have to be step by step.
3. There's no equipment needed list. That should be in the beginning of the instructions manual. With the equipment list, it could leave the reader with unanswered questions. What cord attaches to the computer to upload the recording? Questions such as that could be easily answered with an equipment list.
