Planetary Remote Sensing and Mapping Bo Wu, Kaichang Di, Jürgen Oberst, Irina Karachevtseva, 2018-10-29 The early 21st century marks a new era in space exploration The National Aeronautics and Space Administration NASA of the United States The European Space Agency ESA as well as space agencies of Japan China India and other countries have sent their probes to the Moon Mars and other planets in the solar system Planetary Remote Sensing and Mapping introduces original research and new developments in the areas of planetary remote sensing photogrammetry mapping GIS and planetary science resulting from the recent space exploration missions Topics covered include Reference systems of planetary bodies Planetary exploration missions and sensors Geometric information extraction from planetary remote sensing data Feature information extraction from planetary remote sensing data Planetary remote sensing data fusion Planetary data management and presentation Planetary Remote Sensing and Mapping will serve scientists and professionals working in the planetary remote sensing and mapping areas as well as planetary probe designers engineers and planetary geologists and geophysicists It also provides useful reading material for university teachers and students in the broader areas of remote sensing photogrammetry cartography GIS and geodesy **Planetary Cartography and GIS** Henrik Hargitai, 2019-02-22

This book approaches geological geomorphological and topographical mapping from the point in the workflow at which science ready datasets are available Though there have been many individual projects on dynamic maps and online GISs in which coding and data processing are given precedence over cartographic principles cartography is more than just processing and displaying spatial data However there are currently no textbooks on this rapidly changing field and methods tend to be shared informally Addressing this gap in the literature the respective chapters outline many topics pertaining to cartography and mapping such as the role and definition of planetary cartography and vs Geographic Information Science theoretical background and practical methodologies in geological mapping science ready versus public ready products a goal

procedure focused practical manual of the most commonly used software in planetary mapping which includes generic ArcGIS and its extensions JMARS and specific tools HiView Crater tools etc extracting topographic information from images thematic mapping climate geophysics surface modeling change detection landing site selection shared maps dynamic maps on the web planetary GIS interfaces crowdsourcing crater counting techniques irregular bodies geological unit symbology mapping center activities and web services All chapters were prepared by authors who have actually produced geological maps or GISs for NASA the USGS DLR ESA or MIIGAIK Taken together they offer an excellent resource for all planetary scientists whose research depends on mapping and for students of astrogeology
