

Physical Geology Study Guide for Exam 4

It is important to bring this, and your textbook, to your appointment 15 minutes before the exam. They will be checked at your appointment for the exam. This study guide should be used as a guide, not a crutch. The study guide should be used as a guide, not a crutch. The study guide should be used as a guide, not a crutch.

Answer the following questions:

- 1.1 Describe the hydrologic cycle, components, and processes. (10 points) The hydrologic cycle is a continuous process that moves water around the planet. It is driven by the sun, which heats the water, causing it to evaporate. The water then condenses into clouds, which release it as precipitation. The water then flows into rivers, lakes, and oceans, or it infiltrates the ground and becomes groundwater. The water then flows back into the oceans, completing the cycle.
- 1.2 Describe erosion, and the following erosion processes: weathering, mass wasting, and sedimentation. (10 points) Erosion is the process of wearing away the Earth's surface. It is caused by the action of water, wind, and ice. Weathering is the process of breaking down rocks into smaller pieces. Mass wasting is the process of rocks and soil falling from a cliff or hill. Sedimentation is the process of rocks and soil settling at the bottom of a body of water.
- 1.3 Describe drainage basins and divides. What is the significance of the continental divide? (10 points) A drainage basin is the area of land that drains into a single body of water. A divide is a ridge or hill that separates two drainage basins. The continental divide is a major divide that runs across North America, separating the Atlantic and Pacific Oceans.
- 1.4 Describe drainage patterns, characteristics, and differences between different types of drainage patterns. (10 points) Drainage patterns are the ways in which water flows across the land. There are several types of drainage patterns, including dendritic, trellis, and rectangular. Dendritic patterns are the most common, and they are characterized by a main channel with many smaller tributaries. Trellis patterns are characterized by a main channel with many smaller tributaries that flow in the same direction. Rectangular patterns are characterized by a main channel with many smaller tributaries that flow in different directions.
- 1.5 Describe how erosion, sedimentation, and weathering are affected by climate and vegetation. (10 points) Erosion, sedimentation, and weathering are all affected by climate and vegetation. In a wet climate, erosion is more likely to occur, and in a dry climate, sedimentation is more likely to occur. Vegetation can also affect erosion, as it can help to hold the soil in place.
- 1.6 Describe glacial erosion. What happens when ice moves during a glacial advance? (10 points) Glacial erosion is the process of wearing away the Earth's surface by the action of a glacier. When a glacier advances, it can erode the land beneath it, creating a U-shaped valley. It can also erode the sides of the valley, creating a flat floor.
- 1.7 Describe how ice is eroded by mass wasting, glacial erosion, and sedimentation. (10 points) Ice is eroded by mass wasting, glacial erosion, and sedimentation. Mass wasting is the process of rocks and soil falling from a cliff or hill. Glacial erosion is the process of wearing away the Earth's surface by the action of a glacier. Sedimentation is the process of rocks and soil settling at the bottom of a body of water.
- 1.8 Describe the mechanisms of glacial erosion, including ice, icebergs, and sedimentation. (10 points) The mechanisms of glacial erosion include ice, icebergs, and sedimentation. Ice can erode the land beneath it, creating a U-shaped valley. Icebergs can erode the sides of the valley, creating a flat floor. Sedimentation can erode the bottom of the valley, creating a flat floor.
- 1.9 Describe the different ways that sediment is transported by a glacier, and how it is deposited. (10 points) Sediment is transported by a glacier in several ways. It can be carried in the ice, or it can be carried in the meltwater. It can also be deposited at the end of the glacier, creating a moraine. It can also be deposited in the meltwater, creating a delta.
