**Developing Future-ready Learners for a Global Age** Suzanne S. Choo, Woon Chia Liu, Bee Leng Chua, 2024-12-02  
Suzanne S Choo Woon Chia Liu and Bee Leng Chua offer a dynamic look into the tripartite relationship between education research policy and practice that characterizes Singapore's changing education landscape. Over the years, Singapore has garnered increasing attention internationally for its world-class education system. Pushing back against the stereotypical notions of exam and teacher-centric education in Asia, the contributors to this volume discuss opportunities as well as challenges in Singapore's innovation towards constructivist, critical, culturally responsive and cosmopolitan forms of learning. Highlighting the pedagogical innovation and its context in Singapore's teacher education and schools, the authors bridge theory and practice by providing an understanding of innovative practices informed by key shifts in Singapore's education policies and the key conceptual principles informing these practices. More importantly, it provides on-the-ground empirical insights into the ways these innovative pedagogical practices are enacted in the classroom and in teacher education programmes. Each chapter provides an in-depth understanding of how these pedagogies are applied across various subject disciplines including guided problem solving in Mathematics, games-based pedagogy in Science, multimodal literacies in language, ethical criticism in Literature, Nonlinear Pedagogy in Physical Education, multicultural approaches in music and dialogic pedagogy in drama among others. Balancing theoretical and empirical focus, this resourceful text will be of interest to students, researchers and practitioners in educational development, pedagogy and teacher education as well as policymakers across international fields in education.

**Sea Level Change and Maritime Boundaries** Antoine Grima,2023-06-23 Climate change is modifying in varying measure the coastal geography of States The phenomenon is not temporary but is expected to carry on during the 21st century and beyond A distinctive feature of modern international law is the concept of maritime zones Each maritime area is subject to an intricate scheme of States rights and obligations Coastal geography is a fundamental component of a long standing method developed and agreed upon between States to establish the outward limits of these areas A feature of this method is the baseline In international law it is the only reference line from where the outward limits of maritime zones are measured There are clear rules on how this is established along a coast There is a concern amongst a number of States that rising sea water levels as a result of climate change may compel them to shift their baselines inward thus affecting the outward limits of their maritime zones It is clear that the stability of maritime boundaries is put into question and this may bring about serious political legal and economic repercussions This concern may also affect the outcome of dispute settlement procedures before a competent international court or tribunal the purpose of which is to resolve overlapping maritime claims Key questions emerge What is the role played by coastal geography in the legal regime determining the outward limits of maritime zones What are the consequences of changes to coastal geography To what extent are dispute settlement procedures before a Court or Tribunal immune from this concern Is international law able to address this If so in what way and what are its limits What can be done to resolve this

**Social Capital, Resilience and Adaptation on Small Islands** Jan Petzold,2017-03-24 The book deals with the role of social capital regarding its potential to increase small islands adaptive capacity to climate change The case study of the Isles of Scilly UK shows how social structures can play a very important role for climate change adaptation It is argued that social features have to be understood in a non deterministic and potentially ambivalent manner according to their place specific geographical cultural and historical context Only then risk management and adaptation strategies can succeed and function in a sustainable way The findings have relevance for

the further refinement of social capital theory and social emergence Combined with the perspective of resilience this approach is also relevant from a policy standpoint given that small islands have been identified as hotspots not only due to their vulnerability but also because they serve as examples for media and politics to advance the agenda of environmental protection
