**A Walking Life** Antonia Malchik, 2019-05-07 For readers of On Trails this is an incisive utterly engaging exploration of walking how it is fundamental to our being human how we've designed it out of our lives and how it is essential that we reembrace it I'm going for a walk How often has this phrase been uttered by someone with a heart full of anger or sorrow Or as an invitation a precursor to a declaration of love Our species and its predecessors have been bipedal walkers for at least six million years by now we take this seemingly arbitrary motion for granted Yet how many of us still really walk in our everyday lives Driven by a combination of a car-centric culture and an insatiable thirst for productivity and efficiency we're spending more time sedentary and alone than we ever have before If bipedal walking is truly what makes our species human as paleoanthropologists claim what does it mean that we are designing walking right out of our lives Antonia Malchik asks essential questions at the center of humanity's evolution and social structures Who gets to walk and where How did we lose the right to walk and what implications does that have for the strength of our communities the future of democracy and the pervasive loneliness of individual lives The loss of walking as an individual and a community act has the potential to destroy our deepest spiritual connections our democratic society our neighborhoods and our freedom But we can change the course of our mobility And we need to Delving into a wealth of science history and anecdote from our deepest origins as hominins to our first steps as babies to universal design and social infrastructure A Walking Life shows exactly how walking is essential how deeply reliant our brains and bodies are on this simple pedestrian act and how we can reclaim it *Professional Journal of the United States Army*, 2015 **Military Review**, 2015 Blockchain Melanie Swan, 2015-01-24 Bitcoin is starting to come into its own as a digital currency but the blockchain technology behind it could prove to be much more significant This book takes you beyond the currency Blockchain 1.0 and smart contracts Blockchain 2.0 to demonstrate how the blockchain is in position to become the fifth disruptive computing paradigm after mainframes PCs the Internet and mobile social networking Author Melanie Swan Founder of the Institute for Blockchain Studies explains that the blockchain is essentially a public ledger with potential as a worldwide decentralized record for the registration inventory and transfer of all assets not just finances but property and intangible assets such as votes software health data and ideas Topics include Concepts features and functionality of Bitcoin and the blockchain Using the blockchain for automated tracking of all digital endeavors Enabling censorship-resistant organizational models Creating a decentralized digital repository to verify identity Possibility of cheaper more efficient services traditionally provided by nations Blockchain for science making better use of the data mining network Personal health record storage including access to one's own genomic data Open access academic publishing on the blockchain This book is part of an ongoing O'Reilly series Mastering Bitcoin Unlocking Digital Cryptocurrencies introduces Bitcoin and describes the technology behind Bitcoin and the blockchain Blockchain Blueprint for a New Economy considers theoretical philosophical and societal impact of cryptocurrencies and blockchain technologies *Let's Talk Toddlers* Marie

**Communication and Sport** Michael L. Butterworth, 2021-07-19 Sport is a universal feature of global popular culture It shapes our identities affects our relationships and defines our communities It also influences our consumption habits represents our cultures and dramatizes our politics In other words sport is among the most prominent vehicles for communication available in daily life Nevertheless only recently has it begun to receive robust attention in the discipline of communication studies The handbook of Communication and Sport attends to the recent and

rapid growth of scholarship in communication and media studies that features sport as a central site of inquiry The book attempts to capture a full range of methods theories and topics that have come to define the subfield of communication and sport or sports communication It does so by emphasizing four primary features First it foregrounds communication as central to the study of sport This emphasis helps to distinguish the book from collections in related disciplines such as sociology and also points readers beyond media as the primary or only context for understanding the relationship between communication and sport Thus in addition to studies of media effects mediatization media framing and more readers will also engage with studies in interpersonal intercultural organizational and rhetorical communication Second the handbook presents an array of methods theories and topics in the effort to chart a comprehensive landscape of communication and sport scholarship Thus readers will benefit from empirical interpretive and critical work and they will also see studies drawing on varied texts and sites of inquiry Third the handbook of Communication and Sport includes a broad range of scholars from around the world It is therefore neither European nor North American in its primary focus In addition the book includes contributors from commonly under represented regions in Asia Africa and South America Fourth the handbook aims to account for both historical trajectories and contemporary areas of interest In this way it covers the central topics debates and perspectives from the past and also suggests continued and emerging pathways for the future Collectively the handbook of Communication and Sport aspires to provide scholars and students in communication and media studies with the most comprehensive assessment of the field available

**Synthetic Biology engineering complexity and refactoring cell capabilities** Pablo Carbonell, Jean Marie François, 2015-10-26 One of the key features of biological systems is complexity where the behavior of high level structures is more than the sum of the direct interactions between single components Synthetic Biologists aim to use rational design to build new systems that do not already exist in nature and that exhibit useful biological functions with different levels of complexity One such case is metabolic engineering where with the advent of genetic and protein engineering by supplying

cells with chemically synthesized non natural amino acids and sugars as new building blocks it is now becoming feasible to introduce novel physical and chemical functions and properties into biological entities The rules of how complex behaviors arise however are not yet well understood For instance instead of considering cells as inert chassis in which synthetic devices could be easily operated to impart new functions the presence of these systems may impact cell physiology with reported effects on transcription translation metabolic fitness and optimal resource allocation The result of these changes in the chassis may be failure of the synthetic device unexpected or reduced device behavior or perhaps a more permissive environment in which the synthetic device is allowed to function While new efforts have already been made to increase standardization and characterization of biological components in order to have well known parts as building blocks for the construction of more complex devices also new strategies are emerging to better understand the biological dynamics underlying the phenomena we observe For example it has been shown that the features of single biological components i e promoter strength ribosome binding affinity etc change depending on the context where the sequences are allocated Thus new technical approaches have been adopted to preserve single components activity as genomic insulation or the utilization of prediction algorithms able to take biological context into account There have been noteworthy advances for synthetic biology in clinical technologies biofuel production and pharmaceuticals production also metabolic engineering combined with microbial selection adaptation and fermentation processes allowed to make remarkable progress towards bio products formation such as bioethanol succinate malate and more interestingly heterologous products or even non natural metabolites However despite the many progresses it is still clear that ad hoc trial and error predominates over purely bottom up rational design approaches in the synthetic biology community In this scenario modelling approaches are often used as a descriptive tool rather than for the prediction of complex behaviors The initial confidence on a pure reductionist approach to the biological world has left space to a new and deeper investigation of the complexity of biological processes to gain new insights and broaden the categories of synthetic biology In this Research Topic we host contributions that explore and address two areas of Synthetic Biology at the intersection between rational design and natural complexity 1 the impact of synthetic devices on the host cell or chassis and 2 the impact of context on the synthetic devices Particular attention will be given to the application of these principles to the rewiring of cell metabolism in a bottom up fashion to produce non natural metabolites or chemicals that should eventually serve as a substitute for petrol derived chemicals and on a long term view to provide economical ecological and ethical solutions to today s energetic and societal challenges

Overman,2019-02-11 *Sports Crazy* How Sports Are Sabotaging American Schools exposes the excesses of middle and high school sports and the detrimental effects our sports obsession has on American education Institutions are increasingly emulating college and professional sports models and losing sight of a host of educational and health goals Steven J Overman describes how this agenda is driven largely by partisan fans and parents of athletes who exert an inordinate influence on school priorities and he explains how and why school administrators shockingly and consistently capitulate to these demands The author underscores the incongruity of

public schools involved in an entertainment business and the effects this diversion has on academic integrity learning life experience and overall educational outcomes Overman examines out of control school sports within the context of a school s educational mission and curriculum with telling reference to impacts on physical education He explores as well the outsized place of interscholastic sports beyond the classroom and scrutinizes the distorted relationship between intramural or recreational sports and elitist varsity athletics Overman s chapter on tackle football explains many reasons why this sport should be eliminated from the school extracurriculum and replaced by flag or touch football Overman presents a brief history of interscholastic sports and he compares and contrasts the American experience of school sponsored sport to the European model of community based clubs Which approach better serves students Overman recommends reforms in the context of a radical proposal to phase out interscholastic sports in favor of an intramural or club model This approach would alleviate such problems as elitism and gender bias and reign in hypercompetitiveness while freeing schools to educate students rather than provide public entertainment
