Computer Vision In Robotics And Industrial Applications Dominik Sankowski, Jacek Nowakowski, 2014-06-26 The book presents a collection of practical applications of image processing and analysis. Different vision systems are more often used among others in the automotive industry, pharmacy, military and police equipment, automated production and measurement systems. In each of these fields of technology, digital image processing and analysis module is a critical part of the process of building this type of system. The majority of books in the market deal with theoretical issues. However, this unique publication specially highlights industrial applications, especially industrial measurement applications. Along with its wide spectrum of image processing and analysis applications, this book is an interesting reference for both students and professionals.

Conservation Drones Serge A. Wich, Lian Pin Koh, 2018-05-31 Increasing numbers of ecologists and conservation biologists have begun to explore the use of drone technology to obtain accurate and up-to-date data on the distribution and density of species as well as the threats to their habitats in their ongoing attempts to conserve and monitor biodiversity. Conservation drones are low-cost, autonomous and operator-friendly unmanned aerial vehicles that can be used for surveying, mapping and monitoring both habitat and biodiversity. They are fast becoming a valuable complement to ground-based surveys and satellite imagery for a wide range of ecological and conservation applications. The authors pioneered the use of conservation drones for the purpose of monitoring orangutan populations in Southeast Asia. They subsequently founded ConservationDrones.org to share their knowledge of building and using drones with colleagues in the wider environmental community. This website has proved highly popular and this book aims to further build capacity to use drones and inspire others to adapt emerging technologies for practical conservation.

Robotic Industrialization Thomas Bock, Thomas Linner, 2015-08-10 In this volume, concepts, technologies and developments in the field of building component manufacturing based on concrete, brick, wood and steel as building materials and on large-scale prefabrication delivering complex customized components and products are introduced and discussed. Robotic industrialization refers to the transformation of parts and low-level components into higher-level components, modules and finally building systems by highly mechanized, automated or robot-supported industrial settings in structured off-site environments. Components and modules are open building systems in modular building product structures that are delivered by suppliers to original equipment manufacturers such as, for example, large-scale prefabrication companies or automated robotic on-site factories. In particular, innovative large-scale prefabrication companies have altered the building structures, manufacturing processes and organizational structures significantly to be able to assemble in their factories high-level components and modules from Tier 1 suppliers into customized buildings by heavily utilizing robotic technology in combination with automated logistics and production lines.
