Physics for the Inquiring Mind Eric M. Rogers, 2011-04-17 In our scientific age an understanding of physics is part of a liberal education Lawyers bankers governors business heads administrators all wise educated people need a lasting understanding of physics so that they can enjoy those contacts with science and scientists that are part of our civilization both materially and intellectually They need knowledge and understanding instead of the feelings all too common that physics is dark and mysterious and that physicists are a strange people with incomprehensible interests Such a sense of understanding science and scientists can be gained neither from sermons on the beauty of science nor from the rigorous courses that colleges have offered for generations when the headache clears away it leaves little but a confused sense of mystery Nor is the need met by survey courses that offer a smorgasbord of tidbit they give science a bad name as a compendium of information or formulas The non scientist needs a course of study that enables him to learn real science and make its own with delight For lasting benefits the intelligent non scientist needs a course of study that enables him to learn genuine science carefully and then encourages him to think about it and use it He needs a carefully selected framework of topics not so many that learning becomes superficial and hurried not so few that he misses the connected nature of scientific work and thinking He must see how scientific knowledge is built up by building some scientific knowledge of his own by reading and discussing and if possible by doing experiments himself He must think his own way through some scientific arguments He must form his own opinion with guidance concerning the parts played by experiment and theory and he must be shown how to develop a taste for good theory He must see several varieties of scientific method at work And above all he must think about science for himself and enjoy that These are the things that this book encourages readers to gain by their own study and thinking

Are We There Yet? The Search for a Theory of Everything Moataz H. Emam, 2011-03-25 We live in exciting times the frontiers of physics have been pushed to unprecedented horizons the Holy Grail of fundamental physics research today is to find and describe a theory that explains at least in principle all physical phenomena which in turns explains chemistry biology and other material sciences This however is not without controversy the current candidate for such a theory is known as string or superstring theory It suffers from the problem of being a purely mathematical science with no experimental backing and belief in it has been criticized as bordering on faith as

opposed to scientific scrutiny On the other hand the recent switching on of our most advanced experimental tool the Large Hadron Collider in Switzerland gives new hope in our search for clues as to what the universe is made of on a fundamental level What happened exactly on or even before the Big Bang Where are we coming from and where are we going Questions that have never been addressed before by physicists the game is afoot and the search is on This book contains articles by leading physicists describing the current situation Among them are proponents as well as opponents of string theory proponents of other ideas and experimentalists **Investigating Chemistry** Matthew Johll,2006-03-17 Matthew Johll s book introduces students from a non science background to the fundamentals of chemistry through an array of examples and applications from real life crime scenes Sherlock Holmes stories and authentic accounts of drug deals murders and thefts
