Life and Physical Sciences Research for a New Era of Space Exploration National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee for the Decadal Survey on Biological and Physical Sciences in Space, 2010-08-23 In response to requests from Congress NASA asked the National Research Council to undertake a decadal survey of life and physical sciences in microgravity Developed in consultation with members of the life and physical sciences communities the guiding principle for the study is to set an agenda for research for the next decade that will allow the use of the space environment to solve complex problems in life and physical sciences so as to deliver both new knowledge and practical benefits for humankind as we become a spacefaring people The project's statement of task calls for delivery of two books an interim report and a final survey report Although the development of specific recommendations is deferred until the final book this interim report does attempt to identify programmatic needs and issues to guide near term decisions that are critical to strengthening the organization and management of life and physical sciences research at NASA

Montague Ullman and many more **Exploration and Science** Michael Sean Reidy, Gary Kroll, Erik M. Conway, 2006-12-27

This comprehensive volume explores the intricate mutually dependent relationship between science and exploration how each has repeatedly built on the discoveries of the other and in the process opened new frontiers A simple question Which came first advances in navigation or successful voyages of discovery A complicated answer Both and neither For more than four centuries scientists and explorers have worked together sometimes intentionally and sometimes not in an ongoing symbiotic partnership When early explorers brought back exotic flora and fauna from newly discovered lands scientists were able to challenge ancient authorities for the first time As a result scientists not only invented new navigational tools to encourage exploration but also created a new approach to studying nature in which observations were more important than reason and authority The story of the relationship between science and exploration analyzed here for the first time is nothing less than the history of modern science and the expanding human universe **Priorities in Space Science Enabled by Nuclear Power and Propulsion** National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on Priorities for Space Science Enabled by Nuclear Power and Propulsion, 2006-04-20 In 2003 NASA began an R D effort to develop nuclear power and propulsion systems for solar system exploration This activity renamed Project Prometheus in 2004 was initiated because of the inherent limitations in photovoltaic and chemical propulsion systems in reaching many solar system objectives To help determine appropriate missions for a nuclear power and propulsion capability NASA asked the NRC for an independent assessment of potentially highly meritorious missions that may be enabled if space nuclear systems became operational This report provides a series of space science objectives and missions that could be so enabled in the period beyond 2015 in the areas of astronomy and astrophysics solar system exploration and solar and space physics It is based on but does not reprioritize the findings of previous NRC decadal surveys in those three areas *Science in NASA's Vision for Space Exploration* National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Scientific Context for Space Exploration, 2005-03-01 In January 2004 President Bush announced a new space policy directed at human and robotic exploration of space The National Academies released a report at the same time that independently addressed many of the issues contained in the new policy In June the President's Commission on Implementation of United States Space Exploration Policy issued a report recommending that NASA ask the National Research Council NRC to reevaluate space science priorities to take advantage of the exploration vision Congress also directed the NRC to conduct a thorough review of the science NASA is proposing to undertake within the initiative This report provides an initial response to those requests It presents guiding principles for selecting science missions that enhance and support the exploration program The report also presents findings and recommendations to help guide NASA's space exploration strategic planning activity Separate NRC reviews will be carried out of strategic roadmaps that NASA is developing to implement the policy Data Science &

The Human Exploration of Space Committee on Human Exploration, Commission on Physical Sciences, Mathematics, and Applications, Space Studies Board, Division on Engineering and Physical Sciences, National Research Council, 1998-01-13 During 1988 the National Research Council's Space Science Board reorganized itself to more effectively address NASA's advisory needs The Board's scope was broadened it was renamed the Space Studies Board and among other new initiatives the Committee on Human Exploration was created The new committee was intended to focus on the scientific aspects of human exploration programs rather than engineering issues Their research led to three reports Scientific Prerequisites for the Human Exploration of Space published in 1993 Scientific Opportunities in the Human Exploration of Space published in 1994 and Science Management in the Human Exploration of Space published in 1997 These three reports are collected and reprinted in this volume in their entirety as originally published

And Yet It Moves Mark P. Silverman, 1993-06-17 Originally published in 1993 this book of essays is a largely nonmathematical account of some of the strange behaviour both classical and quantum exhibited by moving particles fluids and waves Drawn from the author's researches in quantum mechanics atomic and nuclear physics electromagnetism and optics gravity thermodynamics and the physics of fluids the essays describe different physical systems whose behaviour provokes surprise and challenges the imagination There are strange processes for which no visualisable mechanism can be given processes that seem to violate fundamental physical laws but which in reality do not processes that are superficially well understood yet turn out to be subtly devious The essays address questions or controversies from whose resolution emerge lessons of general significance regarding the mystery and fascination of motion Anyone with a basic physics background or with an interest in the fundamental questions of physics will find this book of use

Living Matter Alex J. Levine, 2025-11-25 Why the living world may be the next great frontier of physics The frontiers of physics can seem impossibly remote located in the invisible quantum realm or the farthest reaches of the cosmos But one of physics most

exciting frontiers lies much closer than we realize within our own bodies and other living organisms which display astonishingly intricate structural patterns and dynamic processes that we don't yet understand In *Living Matter* leading biophysicist Alex Levine explains why unraveling the mysteries of life may ultimately demand a new physics one that takes full account of the fundamental differences between living and nonliving matter Life is distinct not only because of its evolutionary history and function Levine explains but because it exhibits unique complexities of structure and organizational behavior In addition life thrives in states that are not always predictable by means of the same physical principles used to explain nonliving systems From single proteins to entire collections of cells and from DNA to the eyes ears and brain Levine tours the most promising areas of life where a new physics might be found Along the way he considers many fascinating issues such as the electrical nature of thought and the emergence of life from the inanimate Revealing what the study of the biological world can contribute to physics *Living Matter* unveils the potential scientific revolution that exists in the uncharted territory lying at and in our very fingertips
