Systems explains what a safety management system SMS is and how it reduces risk in order to prevent accidental losses in an organization. It advocates the integration of safety and health into the day to day management of the enterprise as a value rather than an add on and emphasizes that the safety movement must be initiated, led and maintained by management at all levels. The concepts of safety authority, responsibility and accountability are described as the key ingredients to safety system success. Safety system audits are expounded in simple terms and leading safety performance indicators are suggested as the most important measurements in preference to lagging indicators. McKinnon highlights the importance of the identification and control of risk as a key basis for a SMS with examples of a simple risk matrix and daily task risk assessment as well as a simplified method of assessing, analyzing and controlling risks. The book refers to international Guidelines on SMS as well as the proposed International Organization for Standardization ISO 45001 which could soon become the international safety benchmark for organizations worldwide. Using clear, approachable examples, the chapters give a complete overview of an SMS and its components. Confirming to most of the safety management system Guidelines published by leading world authorities, this volume will allow organizations to structure their own world class SMS.
