Dunnivant explains how we might confront the world's largest and most complex environmental crisis: climate change. Capitalism and Environmental Collapse Luiz Marques, 2020-08-17 This book intends to be an alert to the fact that the curve measuring environmental costs against the economic benefits of capitalism has irreversibly entered into a negative phase The prospect of an environmental collapse has been evidenced by the sciences and the humanities since the 1960s Today it imposes its urgency This collapse differs from past civilizations in that it is neither local nor just civilizational It is global and occurs at the broadest level of the biosphere accelerated by the convergence of different socio environmental crises such as Earth energy imbalance climate change and global warming Sea level rise Decrease and degradation of forests Collapse of terrestrial and aquatic biodiversity Floods droughts wildfires and extreme weather events Degradation of soils and water resources Increase in pollution caused by fossil fuels and coal Increase in waste production and industrial intoxication The book is divided in two parts In the first part it presents a comprehensive review of scientific data to show the already visible effects of each of the different environmental crises and its consequences to human life on Earth In the second part Luiz Marques critically discusses what he calls the three concentric illusions that prevent us from realizing the gravity of the current socio environmental crises the illusion of a sustainable capitalism the illusion that economic growth is still capable of providing more well being and the anthropocentric illusion Finally Marques argues that fitting back into the biosphere will only be possible if we dismantle the expansive socioeconomic gear that has shaped our societies since the 16th century by moving from a Social Contract to a Natural Contract which takes into account the whole biosphere According to him the future society will be post capitalist or it will not be a complex society and even perhaps we must fear no society at all This book is backed up with the latest and best science and has made the complexities understandable for the average reader all in a context of hope for the future William J Ripple PhD Distinguished Professor of Ecology Director of the Alliance of World Scientists Oregon State University

After Capital Couze Venn, 2018-04-09 The present crisis of capitalism has a history A history of the private accumulation of wealth through property regimes which allow increasing commodification and the privatisation of resources from land to knowledge and even to life itself Understanding that history may allow us to imagine alternatives after Capital which are no longer private but common After Capital explores this history showing how the

economy is linked to environmental damage climate change resource depletion and to massive inequality It takes the reader from liberalism to neoliberalism from climate change to the Anthropocene and shows how this history is inextricably the history of colonialism It is a rich and detailed narrative of capitalism over the last 200 years that explains its texture and its neoliberal endgame This discussion frames speculation on what postcapitalist societies could be with regimes of private accumulation replaced by a politics and ethics of a democratic and ecologically grounded Commons The Reality Frame Brian Clegg,2017-04-06 Weaving together the great ideas of science The Reality Frame takes us on a thrilling journey from empty space all the way to the human mind Acclaimed science writer Brian Clegg builds up reality piece by piece from space to time to matter movement the fundamental forces life and the massive transformation that life itself has wrought on the natural world He reveals that underlying it all is not as we might believe a system of immovable absolutes but the ever shifting amorphous world of relativity From religion to philosophy humanity has traditionally sought out absolutes to explain the world around us but as science has developed relativity has swept away many of these certainties leaving only a handful of unchangeable essentials such as absolute zero nothingness light leading to better science and a new understanding of the essence of being human This is an Ascent of Man for the 21st century the gripping story of modern science that will fill you with wonder and give you a new insight into our place in the universe **Mind Shift** John Parrington,2021-04-22 John Parrington argues that social interaction and culture have deeply shaped the exceptional nature of human consciousness The mental capacities of the human mind far outstrip those of other animals Our imaginations and creativity have produced art music and literature built bridges and cathedrals enabled us to probe distant galaxies and to ponder the meaning of our existence When our minds become disordered they can also take us to the depths of despair What makes the human brain unique and able to generate such a rich mental life In this book John Parrington draws on the latest research on the human brain to show how it differs strikingly from those of other animals in its structure and function at a molecular and cellular level And he argues that this shift enlarging the brain giving it greater flexibility and enabling higher functions such as imagination was driven by tool use but especially by the development of one remarkable tool language The complex social interaction brought by language opened up the possibility of shared conceptual worlds enriched with rhythmic sounds and images that could be drawn on cave walls This transformation enabled modern humans to leap rapidly beyond all other species and generated an exceptional human consciousness a sense of self that arises as a product of our brain biology and the social interactions we experience Our minds even those of identical twins are unique because they are the result of this extraordinarily plastic brain exquisitely shaped and tuned by the social and cultural environment in which we grew up and to which we continue to respond through life Linking early work by the Russian psychologist Lev Vygotsky to the findings of modern neuroscience Parrington explores how language culture and society mediate brain function and what this view of the human mind may bring to our understanding and treatment of mental illness **Christian Foundations for Law and**

Science Gregory J. Glaser, 2023-07-06 In biblical Hebrew there is a word that means both God and nothing Paradoxically what if God himself is simultaneously the All and the Nothing Would this help explain why God is invincible and paradoxical Paradoxes fill reality with opposites routinely manifesting as the same thing at their extremes Like the rugged earth there is danger amidst opportunity here While we study paradoxes to strengthen our connection with God surprisingly in the process we learn about Satan's hypocrisies that crudely mimic paradoxes in our lives The Bible teaches that Satan is a lying imitator and a murderer Why would God desire to teach us about God's own paradoxical creative power by comparison to Satan's destructive power of hypocrisy Much of the Bible is devoted to answering this question by exposing hypocrisies in human culture and character The Messiah particularly exposed the teachers of the law scribes and Pharisees as hypocrites When we get deeply self honest we know God is just because we open our minds to possibilities that everything happens for a reason where even the crucifixion of God's son creates healing ultimately
