Using Design Research and History to Tackle a Fundamental Problem with School Algebra Sinan Kanbir, M. A. (Ken) Clements, Nerida F. Ellerton, 2017-10-28 In this well illustrated book the authors Sinan Kanbir Ken Clements and Nerida Ellerton tackle a persistent and universal problem in school mathematics why do so many middle school and secondary school students find it difficult to learn algebra well What makes the book important are the unique features which comprise the design research approach that the authors adopted in seeking a solution to the problem The first unique feature is that the authors offer an overview of the history of school algebra Despite the fact that algebra has been an important component of secondary school mathematics for more than three centuries there has never been a comprehensive historical analysis of factors influencing the teaching and learning of that component The authors identify through historical analysis six purposes of school algebra a algebra as a body of knowledge essential to higher mathematical and scientific studies b algebra as generalized arithmetic c algebra as a prerequisite for entry to higher studies d algebra as offering a language and set of procedures for modeling real life problems e algebra as an aid to describing structural properties in elementary mathematics and f algebra as a study of variables They also raise the question whether school algebra represents a unidimensional trait Kanbir Clements and Ellerton offer an unusual hybrid theoretical framework for their intervention study by which seventh grade students significantly improved their elementary algebra knowledge and skills Their theoretical frame combined Charles Sanders Peirce's triadic signifier interpretant signified theory which is in the realm of semiotics with Johann Friedrich Herbart's theory of apperception and Ken Clements and Gina Del Campo's theory relating to the need to expand modes of communications in mathematics classrooms so that students engage in receptive and expressive modes Practicing classroom teachers formed part of the research team This book appears in Springer's series on the History of Mathematics Education Not only does it include an important analysis of the history of school algebra but it also adopts a theoretical frame which relies more on theories from the past than on contemporary theories in the field of mathematics education The results of the well designed classroom intervention are sufficiently impressive that the study might have created and illuminated a pathway for future researchers to take

Visual Thinking Temple Grandin, Ph.D., 2022-10-11

INSTANT NEW YORK TIMES BESTSELLER WINNER OF THE NAUTILUS GOLD AWARD A powerful and provocative testament to the diverse coalition of

minds we'll need to face the mounting challenges of the twenty first century Steve Silberman An absolute eye opener Frans

de Waal A landmark book that reveals celebrates and advocates for the special minds and contributions of visual thinkers A

quarter of a century after her memoir Thinking in Pictures forever changed how the world understood autism Temple

Grandin an anthropologist on Mars as Oliver Sacks dubbed her transforms our awareness of the different ways our brains are

wired Do you have a keen sense of direction a love of puzzles the ability to assemble furniture without crying You are likely a

visual thinker With her genius for demystifying science Grandin draws on cutting edge research to take us inside visual

thinking Visual thinkers constitute a far greater proportion of the population than previously believed she reveals and a more

varied one from the photo realistic object visualizers like Grandin herself with their intuitive knack for design and problem

solving to the abstract mathematically inclined visual spatial thinkers who excel in pattern recognition and systemic thinking

She also makes us understand how a world increasingly geared to the verbal tends to sideline visual thinkers screening them

out at school and passing over them in the workplace Rather than continuing to waste their singular gifts driving a collective

loss in productivity and innovation Grandin proposes new approaches to educating parenting employing and collaborating

with visual thinkers In a highly competitive world this important book helps us see we need every mind on board

Modern

Mathematics Dirk De Bock, 2023-03-08 The international New Math developments between about 1950 through 1980 are regarded by many mathematics educators and education historians as the most historically important development in curricula of the twentieth century. It attracted the attention of local and international politicians, teachers, and of parents and influenced the teaching and learning of mathematics at all levels, kindergarten to college graduate, in many nations. After garnering much initial support, it began to attract criticism. But as Bill Jacob and the late Jerry Becker show in Chapter 17, some of the effects became entrenched. This volume, edited by Professor Dirk De Bock of Belgium, provides an outstanding overview of the New Math/modern mathematics movement. Chapter authors provide exceptionally high quality analyses of the rise of the movement and of subsequent developments within a range of nations. The first few chapters show how the initial leadership came from mathematicians in European nations and in the United States of America. The background leaders in Europe were Caleb Gattegno and members of a mysterious group of mainly French pure mathematicians who, since the 1930s, had published under the name of a fictitious Nicolas Bourbaki. In the United States, there emerged during the 1950s various attempts to improve U.S. mathematics curricula and teaching, especially in secondary schools and colleges. This side of the story climaxed in 1957 when the Soviet Union succeeded in launching Sputnik, the first satellite. Undoubtedly, this is a landmark publication in education. The foreword was written by Professor Bob Moon, one of a few other scholars to have written on the New Math from an international perspective. The final epilogue chapter by Professor Geert Vanpaemel, a historian, draws together the overall thrust of the volume and makes links with the general history of curriculum development, especially in science education, including recent globalization trends.

STEM Education in the Junior Secondary Robyn Jorgensen, Kevin Larkin, 2017-08-09 This book brings together a collection of internationally renowned authors in the STEM field to share innovations in the teaching of STEM. It focuses on the junior secondary years of education, students aged 11–15, since this is the age range in which students choose whether or not to formally opt out of STEM education. It is here that the book makes a significant contribution to the field by integrating the STEM area and focusing on the junior years of schooling. While developing this book, the editors drew on two main premises. Firstly, STEM is seen as the integrated study of science, technology, engineering, and mathematics in a coherent learning paradigm that is based on real-world applications. Secondly, it is important to integrate digital technologies into STEM education beyond the superficial use of ICTs seen in many schools. The book also addresses the challenges within STEM education, many of which are long-standing. To this end, it includes chapters on marginalised and diverse communities, ensuring that a broad range of perspectives on STEM education is included.

Resources in Education, 1998 **Mathematics and Multi-Ethnic Students** Yvelyne

Germain-McCarthy, 2017-05-25 *Mathematics and Multi-Ethnic Students* provides detailed profiles of teachers across the nation who have implemented effective mathematics instruction for diverse student populations. In this revised edition, Yvelyne Germain-McCarthy expands upon the popular case studies and adds two new chapters to highlight the latest

educational research and practices that are reflected in the case studies A third new chapter introduces the concept of the Life Long Learning Laboratory where courageous questions on issues such as the impact of race on student learning are discussed Featuring useful framing tools including the Discussion with Colleagues and Commentary sections Mathematics and Multi Ethnic Students translates concrete instances of access and equity into generalized problem solving methods for promoting ethnic diversity across grade levels An important resource for pre service and in service educators researchers administrators and policy makers this volume highlights the work of teachers who have gone beyond mere awareness of reform recommendations in mathematics instruction By uniting the goals of multicultural education with those of the mathematics curriculum educators will learn to conceptualize and implement best practices for effective equitable teaching and learning of mathematics for their students *Learning Experiences To Promote Mathematics Learning: Yearbook 2014, Association Of Mathematics Educators* Pee Choon Toh,Tin Lam Toh,Berinderjeet Kaur,2014-05-27 This sixth volume in the series of yearbooks by the Association of Mathematics Educators in Singapore entitled Learning Experiences to Promote Mathematics Learning is unique in that it focuses on a single theme in mathematics education The objective is for teachers and researchers to advance the learning of mathematics through meaningful experiences Several renowned international and Singapore scholars have published their work in this volume The fourteen chapters of the book illustrate evidence based practices that school teachers and researchers can experiment with in their own classrooms to bring about meaningful learning outcomes Three broad themes namely fundamentals for active and motivated learning learning experiences for developing mathematical processes and use of ICT tools for learning through visualizations simulations and representations shape the ideas in these chapters The book makes a significant contribution towards the learning of mathematics It is a good resource for mathematics teachers educators and research students *Research in Education* ,1973
