SECTION 3

Fire Hazard Analysis Techniques

By David W. Rye
David W. Rye, P.E., is a senior fire protection engineer at the University of Maryland System.

Fire hazard analysis is a systematic process for identifying, evaluating, and quantifying the potential fire hazards in a facility. It is a critical component of the fire protection engineering process, providing a basis for the design of fire protection systems and the development of fire safety programs. The process involves a systematic review of the facility's operations, processes, and materials, and the identification of potential fire hazards. This information is then used to evaluate the risk of fire and to develop fire protection measures to reduce the risk.
