Procedures for Including Human Engineering Factors in the Development of Weapon Systems Harold P. Van Cott, James William Altman, 1958 At each stage in the development of a new weapon system appropriate action must be taken regarding the eventual role which men will play in operating and maintaining the completed system The use of systematic procedures for solving problems and making decisions with respect to these human engineering factors and for articulating them with other aspects of system development assures that the weapon system

emerges as a maximally effective man machine system This report is intended to suggest systematic procedures for the human engineering of developmental weapon systems A brief discussion of man machine systems and the role of human engineering in their design is followed by a design schedule This schedule suggests at what points and in what ways human engineering should be accomplished Following the design schedule procedures that may be used to assess and solve human engineering problems are suggested Finally human capabilities and limitations are discussed from the point of view of the man as a system component Abstract **Houghton Mifflin Math Central: Student text** ,1998 **Advances in**
